CASH TO COMPANY

Grade 2

Item Bank

"*Businesses solve problems*"

Per-unit quiz / test items · 4 units · ETS-quality alignment to Jump$tart, CEE, CCSS, C3, CASEL, NGSS-ETS

Grade 2 — Cash to Company Item Bank

Year theme: *Businesses solve problems.* This bank covers all four Grade 2 units (Problems we see · Coins and change · Signs, teams, and fair play · The Solve-It Fair). Items use simple math (CCSS 2.MD.C.8) and short text (1-2 sentences). Distractors target the Common Misconceptions table for Grade 2. No family-money probes; "for a hypothetical" framing throughout. Cash's voice: 6-10 words, concrete, warm.

Unit 1: Problems we see

MC1. Cash reads: "At recess, the markers always end up scattered. Kids spend the first five minutes looking for them." Which is a "problem a business could solve"?

A. Recess is too short · B. Markers get lost and waste time · C. Kids don't like art · D. The teacher is mean

Answer: B · **Standard:** *NGSS-ETS K-2-ETS1-1 — Ask questions, make observations, and gather information about a situation people want to change.* · **Strand outcome (PSIG, 2):** *I can fill out a "Problem → Idea" card (problem in my school + one idea to fix it) and share it with a partner.* · **Misconception targeted:** "*A problem is something you complain about*" — A and D bait this; B is a describable problem.

MC2. "For a hypothetical school, kids' jackets keep getting mixed up at the coat hooks." Which idea best solves this problem?

A. Get rid of jackets · B. Stop wearing jackets · C. Add a name tag to each hook · D. Tell kids to remember harder

Answer: C · **Standard:** *CASEL Responsible Decision-Making — Identify a problem and propose a solution.* · **Strand outcome (PSIG, 2):** *I can fill out a "Problem → Idea" card and share it with a partner.* · **Misconception targeted:** "*If I came up with the idea, my idea is the best one*" — D baits the "try harder" non-solution.

MC3. Cash asks: Which one is a real problem you could write on a Problem Wall?

A. Lupita is mean · B. Dropped lunch trays make a mess and food gets wasted · C. School is boring · D. I don't like Mondays

Answer: B · **Standard:** *Jump$tart Standard 6 (Financial Decision Making), Benchmark 4-1 — Identify the costs and benefits of a financial decision.* · **Strand outcome (BAVC, 2):** *I can identify a problem and name a business that already solves a problem like it.* · **Misconception targeted:** "*A problem is about a person you don't like*" — A baits this; B is describable.

SA1. Cash says: "For a hypothetical bus stop where kids get rained on, write a Problem→Idea card. One sentence for the problem. One sentence for the idea."

Model answer: "*Problem: Kids get wet at the bus stop because there is no roof. Idea: Build a small covered shelter at each stop.*"

Scoring guide (3-2-1): - **3:** Both sentences specific AND idea matches the problem. - **2:** Both sentences present but one is vague. - **1:** Only one sentence, or idea doesn't match.

SA2. "Name a real business that already solves a problem like 'kids' shoes get muddy on rainy days.' What problem does it solve, and how?"

Model answer: "*Boot stores. They sell rain boots. The problem is wet feet. The boots keep feet dry.*"

Scoring guide (3-2-1): - **3:** Names a real business AND the problem-it-solves connection. - **2:** Names a business but the connection is vague. - **1:** Cannot name a relevant business.

Performance Task: Problem Wall + Problem of the Week pitch (30 min over 2 sessions).

Child writes a Problem→Idea card (1 sentence each), posts to the class Problem Wall, and on Friday, three children present their cards to the class for a "Problem of the Week" vote. **Rubric:** Reflection Writing Rubric (Grade 2 scale-down): (1) describable problem (no person-attack), (2) idea matches problem, (3) shared with at least one partner. **Strand outcome:** PSIG + BAVC.

Extension (advanced learner):

"*You wrote a Problem→Idea card. Now: who would PAY to make this idea happen? Name one customer.*" Model: parents pay for kids' rain shelters; the school pays for hooks; etc. Previews Grade 3 customer-statement work.

Unit 2: Coins and change

MC1. "For a hypothetical store, the toy costs 67¢. The customer hands you a $1 bill. How much change do you give?"

A. 67¢ · B. 33¢ · C. $1 · D. 0¢

Answer: B · **Standard:** *CCSS-Math 2.MD.C.8 — Solve word problems involving dollar bills, quarters, dimes, nickels, and pennies.* · **Strand outcome (MFL, 2):** *I can make change from a dollar for an item that costs less than a dollar, using coins.* · **Misconception targeted:** "*If the item is 67 cents, you give 67 cents back*" — A baits this; B is the change.

MC2. "You charged 45¢. The customer paid with a dollar. The fastest way to give change is to count UP from 45¢. What's the first step?"

A. Give 5 pennies, then a dime, then 2 quarters, getting to $1 · B. Give the customer 45¢ back · C. Give the customer the dollar back · D. Give the customer nothing

Answer: A · **Standard:** *CCSS-Math 2.MD.C.8 — Solve word problems involving money.* · **Strand outcome (MFL, 2):** *I can make change from a dollar for an item that costs less than a dollar.* · **Misconception targeted:** "*Making change means counting DOWN from a dollar*" — A models the count-up move; the others bait wrong returns.

MC3. "For a hypothetical lemonade cup that costs 80¢, what's the right change from $1?"

A. 10¢ · B. 15¢ · C. 20¢ · D. 80¢

Answer: C · **Standard:** *CCSS-Math 2.MD.C.8.* · **Strand outcome (MFL, 2):** *I can make change from a dollar for an item that costs less than a dollar.* · **Misconception targeted:** "*Quick subtraction is hard, just guess*" — A and B bait undercounts.

SA1. "For a hypothetical eraser that costs 27¢, the customer pays $1. Tell me the change in two ways: as cents, and as the coins you would actually give."

Model answer: "*73 cents. I would give 2 quarters, 2 dimes, and 3 pennies.*"

Scoring guide (3-2-1): - **3:** 73¢ AND a valid coin combo. - **2:** 73¢ but coin combo is wrong, OR a valid combo but cents wrong. - **1:** Both wrong.

SA2. "A friend says, 'I'll pay you back tomorrow.' They never do. Is that fair to you? What should they have said instead?"

Model answer: "*It's not fair. They should have said when they could really pay me back, or said 'I can't pay right now.'*"

Scoring guide (3-2-1): - **3:** Names "not fair" AND a specific honest alternative. - **2:** Names one of the two. - **1:** Cannot decide or says "it's fine."

Performance Task: Class Market Day (45 min, paired).

Each child runs a pretend market stall for 10 minutes with a price sign (e.g., "Pretzel — 65¢"); they make change correctly for at least 3 customers (their classmates), recording each transaction on a tally sheet. **Rubric:** Budget Project Rubric (2 scale-down): (1) prices clearly posted, (2) change correct in at least 3/3 transactions, (3) tally sheet legible. **Strand outcome:** MFL + ESL.

Extension (advanced learner):

"*For a hypothetical store, you charged 38¢. The customer paid with $1. Show the change using the FEWEST coins possible.*" Model: 62¢ = 2 quarters + 1 dime + 2 pennies (5 coins).

Unit 3: Signs, teams, and fair play

MC1. (Two signs shown: Sign 1 is colorful with sparkles but says "Yo Yo Stuff!"; Sign 2 says plainly "PIZZA — $2 a slice — Open until 3.") Cash asks: **Which sign helps the customer more?**

A. Sign 1, because it's pretty · B. Sign 2, because it tells the customer what, how much, and when · C. Both equally · D. Neither

Answer: B · **Standard:** *CCSS-ELA W.2.2 — Write informative/explanatory texts.* · **Strand outcome (CBM, 2):** *I can draw a "sign that helps customers" (open/closed, line forms here, today's special) and explain why it helps.* · **Misconception targeted:** "*If a sign is colorful, it works*" — A baits; B is correct.

MC2. (Skit: 3 students. One says "I'll plan it." One says "I'll sell it." One says "I'll buy it.") Cash asks: **Who is the customer?**

A. The planner · B. The seller · C. The buyer · D. Cash

Answer: C · **Standard:** *CASEL Self-Awareness — Recognize roles in classroom dramatic play.* · **Strand outcome (LTO, 2):** *I can identify "the boss," "the worker," and "the customer" in a classroom skit and say what each one does.* · **Misconception targeted:** "*Boss and customer are the same role*" — corrects.

MC3. Cash reads: "A snack bar charges different prices to different kids for the same snack." Is this fair to the customer?

A. Yes, it's fine · B. No, the price should be the same for the same snack · C. Yes, if the snack bar is small · D. Yes, if the kids don't notice

Answer: B · **Standard:** *Jump$tart Standard 6 (Financial Decision Making), Benchmark 4-1 — Identify costs and benefits of a financial decision.* · **Strand outcome (ESL, 2):** *I can tell whether something in a story was "fair to the customer" and give a reason.* · **Misconception targeted:** "*If customers don't notice, it's fine*" — D baits this.

SA1. "For a hypothetical class store, design a sign in words. What three things should it say so customers know what to do?"

Model answer: "*OPEN. Crackers, 5¢ each. Line forms here.*"

Scoring guide (3-2-1): - **3:** Names three customer-helping things (open/closed, item+price, action cue). - **2:** Names two. - **1:** Names one or fewer.

SA2. "In a 3-person classroom skit (boss, worker, customer), tell me what each role does."

Model answer: "*The boss decides. The worker does the work. The customer pays for what they want.*"

Scoring guide (3-2-1): - **3:** All three roles described with a different verb. - **2:** Two of three correct. - **1:** One or fewer.

Performance Task: Helpful Sign Design + Skit (45 min, partner pair).

Each child designs a "Helpful Sign" (name, item, price, action cue) on paper. Then in a 3-person team they perform a 90-second skit where one is boss, one is worker, one is customer; the sign is used in the skit. **Rubric:** Pitch Presentation Rubric (2 scale-down: drop Q&A): (1) sign has all four elements, (2) roles distinct in skit, (3) "fair to customer" check passes (no different-prices-to-different-kids). **Strand outcome:** CBM + LTO + ESL.

Extension (advanced learner):

"*For a hypothetical store, your sign says CRACKERS — 5¢. A friend asks for 4 crackers for 15¢. Is that fair? What's a fair price for 4 crackers?*" Model: not fair; 4 × 5 = 20¢; the right price is 20¢.

Unit 4: The Solve-It Fair

MC1. "You drew a Problem→Idea card. A classmate said, 'It's good but the idea costs too much.' What's the right next step?"

A. Get mad · B. Throw the card away · C. Ask, 'What would you change?' and write it down · D. Ignore them

Answer: C · **Standard:** *CCSS-ELA W.2.2 — Write informative/explanatory texts.* · **Strand outcome (LRCI, 2):** *I can ask one classmate "what would you change?" about a product I made, and write down what they said.* · **Misconception targeted:** "*Feedback is an attack*" — corrects with a concrete revision move.

MC2. "For a hypothetical pencil-sharing idea, your card says 'I'll share my pencils with anyone who asks.' A classmate asks, 'What if 30 kids ask?' This question is..."

A. Mean · B. Helpful — it's a real problem to think about · C. Wrong · D. Off-topic

Answer: B · **Standard:** *CASEL Responsible Decision-Making.* · **Strand outcome (LRCI, 2):** *I can ask one classmate "what would you change?" about a product I made, and write down what they said.* · **Misconception targeted:** "*Tough questions are mean*" — corrects.

MC3. Cash reads: "A juice box says '100% juice.' Another says 'juice drink.' Are they the same thing?"

A. Yes, same thing · B. No, "100% juice" has no other ingredients; "juice drink" has other things added · C. Yes, "drink" just means "100% juice" · D. The drinks are pretend

Answer: B · **Standard:** *Jump$tart Standard 6 (Financial Decision Making), Benchmark 4-1.* · **Strand outcome (ESL, 2):** *I can tell whether something in a story was "fair to the customer" and give a reason.* · **Misconception targeted:** "*All product names mean the same thing*" — corrects with honest-claims foundation.

SA1. "You showed a classmate your Problem→Idea card. Write what they said when you asked, 'What would you change?' (1-2 sentences.)"

Model answer: "*They said: make the shelter bigger so the bus driver can see kids waiting.*"

Scoring guide (3-2-1): - **3:** Quotes a specific change suggestion in classmate's voice. - **2:** Paraphrases a change but is vague. - **1:** Cannot record any change.

SA2. "Cash's Problem→Idea card said 'kids' jackets get mixed up — add name tags.' Another classmate says, 'But what if a kid forgets their name tag?' What's a fair next-step idea?"

Model answer: "*Add a backup color sticker, or a hook with the kid's photo.*"

Scoring guide (3-2-1): - **3:** Names a specific backup that addresses the new question. - **2:** Names a vague backup ("ask the teacher"). - **1:** Cannot offer a fix.

Performance Task: The Solve-It Fair (45 min, all-class event).

Each child posts their Problem→Idea card and stands at it for a 5-minute "fair" rotation. They get one written piece of feedback from each visiting classmate (sticky note on a feedback sheet). They then write a 1-sentence revision based on the strongest feedback. **Rubric:** Reflection Writing Rubric (2 scale-down): (1) card complete, (2) at least 3 sticky notes received, (3) one written revision. **Strand outcome:** LRCI + PSIG + LTO.

Extension (advanced learner):

"*Two classmates gave you opposite feedback. One said 'too small,' the other said 'too big.' What do you do?*" Model: ask both why; pick the reason that helps the customer (not just splits the difference). Plant the seed for Grade 3's evidence-led idea selection.

Total this grade: 12 MC + 8 SA + 4 Performance Tasks + 4 Extensions = 28 items.
