GRADE 09 · CASH VIDEO SCRIPTS

Eight Scripts. One Cash.

From flash of inspiration to repeatable discipline.

9

Eight short videos, one per major Grade 9 milestone. Each script targets 2:30–3:00 finished runtime, ~350–420 spoken words. Scripts include a hook, content arc, and a CTA (call to action) that lands in a classroom assignment or journal prompt. Voice and personality follow the Cash Mascot Style Guide — curious, warm, honest, never flatters, never says "everyone can be rich." The 9-12 voice is multi-sentence and argumentative; Cash builds 4–6 sentence points and concedes uncertainty out loud.

WITH CASH - GRADE 9 SCRIPT SET

"Eight scripts, one Cash. Each ends in a CTA you can teach Wednesday."

Format conventions:

- **[VISUAL]** = animated visual cue.
- **CASH:** = spoken dialogue.
- **[SFX]** = sound effect or music cue.

Video 1 — "Entrepreneurship Is a Method, Not a Personality" (Week 1, Unit 1 Launch)

> "Most adults skip this step. You won't."
>
> - CASH, GRADE 9

GRADE 9 · 2:30–3:00 · CASH VOICE

Runtime target: 2:55 **Strand mapping:** BAVC + PSIG + LRCI

VISUAL Cash, the coin-shaped mascot, sitting on a stool with a small notebook. Behind Cash, a warm but minimal high-school-age backdrop. The K-8 classroom backdrop students may remember has been replaced with something a little older — a corkboard, a mug, a worn-in set of pens.

CASH: Hey. Welcome to high school Cash to Company. Quick check-in. For the last few years, we've been on one question. Which people, and how do you know? That question still applies. Always will. But this year, I'm going to make it a little harder. The question becomes: Which people, and how do you know? Show me the evidence.

VISUAL The two questions stack on screen, the second appearing slightly more boldly.

CASH: Here's why. You're old enough now that I can be straight with you. The world is full of adults who run businesses on opinions. Some of them got lucky. Some of them are about to get unlucky. You'll meet adults who skipped this part and got lucky anyway. Don't model your career on luck. Model it on the moves.

VISUAL Two characters appear — one labeled "GOT LUCKY," holding a confused-looking trophy; one labeled "DID THE MOVES," holding a tidy notebook. Cash gestures toward the second one.

CASH: Here's the year. Four moves. Move one — map your venture across nine boxes. The Business Model Canvas. Customers, value prop, channels, relationships, revenue, key activities, resources, partners, costs. Each box is an assumption you'll either back with evidence or label as a flag.

VISUAL A 9-box grid appears, briefly highlighting each box.

CASH: Move two — talk to five real customers. Not your friends pretending. Not your imagination. Real interviews, coded for patterns. By December, your Canvas will look different. Not because you changed your mind for fun. Because evidence rewired it.

VISUAL Two Canvas drafts appear side by side. The second has red dots on three boxes.

CASH: Move three — model the money. A one-year P&L. Revenue, COGS, gross margin, OpEx, net income. Every line is a number. Every number is an assumption you can defend.

VISUAL A simple P&L on screen with five lines, each glowing briefly.

CASH: Move four — run a two-week test. The smallest experiment that could change your mind. With a pre-committed metric. With a kill, iterate, or scale rule. Before you start.

VISUAL A stopwatch appears, then a fork in the road labeled KILL · ITERATE · SCALE.

CASH: Most adults skip this. You won't.

VISUAL A blank index card appears with the sentence frame: "This venture only works if _____."

CASH: Your move this week. Write your Day 1 Riskiest Assumption. The one thing about your venture that, if it turned out to be wrong, would mean the whole thing falls apart. We'll come back to that card three times this year. Be specific. Be wrong if you have to. Be in the game.

CLASSROOM CTA

"Write your Day 1 Riskiest Assumption. Sentence frame: 'This venture only works if [specific people] do [specific thing] for [specific reason].' Bring it Wednesday."

VISUAL Cash waves. Fade.

SCRIPT

Video 2 — "Customer Discovery Beats Customer Prediction" (Week 9, Unit 2 Launch)

GRADE 9 · 2:30–3:00 · CASH VOICE

Runtime target: 2:50 **Strand mapping:** PSIG + CBM + LRCI

VISUAL Cash at a desk with two folders. One labeled "WHAT I IMAGINED." One labeled "WHAT THEY ACTUALLY SAID."

CASH: Quick story. A 9th grader I made up to be true — let's call her Lin — has a tutoring venture idea. On Day 1, her Canvas says her customer is "8th-graders struggling with

algebra." Her value prop is "personalized 1:1 help." Her channel is "Instagram." She's confident.

VISUAL Lin's Canvas v1 appears, mostly yellow assumption flags.

CASH: **Then she does five interviews. Mom Test rules — no compliments, no hypotheticals, no generics. She asks about the actual last time the kid sat down to do homework. What was hard. What they did instead. What their parent did or didn't do.**

VISUAL Five interview cards stack up, each with anonymized initials.

CASH: **Here's what she finds. Three of five 8th-graders said the homework wasn't the problem. The problem was the missing first step. The kid didn't know how to start. They'd open the textbook, stare, and then text someone. Two of five said their parents kept hiring tutors who showed up and did practice problems — which is the opposite of teaching them how to start.**

VISUAL A pattern emerges — five interview cards converging on the words "MISSING FIRST STEP."

CASH: **That's a pattern. Three of five is a pattern. So Lin's Canvas changes. Customer segment now reads "8th-graders who freeze at the start of a homework session." Value prop now reads "we teach the first move, not the whole problem set." Channel — well, three of five mentioned their parents heard about tutors from a school newsletter, not from Instagram. So that box flips too.**

VISUAL Canvas v2 appears next to v1. Three boxes are circled in red. The differences are visible.

CASH: **Now here's the move that matters. Lin didn't pivot because the interviews were "negative." She pivoted because the evidence was clearer than her imagination. That's customer discovery. It's the move where a Canvas that started yellow earns its way to green.**

VISUAL One box transitions from a yellow flag to a green check.

CASH: **A note. Five interviews aren't statistical proof. They're a sample. A pattern at five is "worth taking seriously and investigating further." A pattern at fifty is "well-supported."**

Don't oversell five. But don't ignore it either. Five real interviews are still better than fifty hours of imagining.

CLASSROOM CTA

"This week, schedule your first two interviews. Use the Mom Test rules. Bring transcripts Friday — initials only."

[Fade.]

SCRIPT

Video 3 — "Mapping the Riskiest Box" (Week 5, Mid-Unit 1)

GRADE 9 · 2:30–3:00 · CASH VOICE

Runtime target: 2:40 **Strand mapping:** BAVC + OSO

VISUAL Cash standing next to a giant 9-box Business Model Canvas drawn on a chalkboard. The boxes are labeled but mostly empty.

CASH: **Let me tell you the most useful question I know about a Business Model Canvas. Ready? Which box, if I were wrong about it, would sink the whole thing?**

VISUAL The question appears on screen.

CASH: **That box has a name. We call it the riskiest box. Most adults don't ask this question. They look at all nine boxes equally and try to "fill them in" the way you'd fill in a worksheet. That's the wrong move.**

VISUAL A clipboard with all nine boxes filled in identical handwriting flashes briefly. Cash shakes their head.

CASH: **Here's the trick. The riskiest box is almost always one of two — customer segments or value proposition. Why? Because if you're wrong about who you're for, every other box is built on sand. If you're wrong about what frustration you address, your channels point at the wrong people, your revenue model targets the wrong willingness-to-pay, your costs structure delivers the wrong thing.**

VISUAL A tower of boxes labeled "everything else" balances on a single block labeled "CUSTOMER + VALUE PROP." The block wobbles.

CASH: **Sometimes the riskiest box is something else. If your venture depends on a single key partner — say, a parent who agreed to drive you, or a vendor with a special discount — that box might be it. If your cost structure assumes you can buy supplies wholesale and you've never tried, that's a real risk too.**

VISUAL Three different "riskiest box" arrows appear, pointing at customer, value prop, and key partners on different example Canvases.

CASH: **The point is you have to pick one. Naming the riskiest box is a discipline, not a guess. Once you've named it, your unit-2 interviews target that assumption first. You're not interviewing to "validate the idea." You're interviewing to find out if the riskiest box is wrong.**

VISUAL The riskiest box on a sample Canvas turns from a yellow flag to a question mark, then to a magnifying glass.

CASH: **One more thing. If you're staring at your Canvas and every box feels equally risky — that's actually evidence you haven't picked a real customer yet. Vague customer makes everything risky. Specific customer makes one or two boxes risky and the rest manageable.**

CLASSROOM CTA

"By Friday: write your riskiest-box memo. One paragraph. Which box? Why? What would tell you you're wrong? Bring it to the Wednesday work block."

[Fade.]

SCRIPT

Video 4 — "A One-Year P&L Is a Thinking Tool" (Week 19, Unit 3 Launch)

GRADE 9 · 2:30–3:00 · CASH VOICE

Runtime target: 2:55 **Strand mapping:** MFL + BAVC

VISUAL Cash sitting at a desk with a spreadsheet open. Five rows are visible: Revenue, COGS, Gross Margin, OpEx, Net Income.

CASH: Let me tell you something most people don't realize about a profit-and-loss statement. It's not an accounting form. It's a thinking tool. A P&L forces you to commit to numbers, and the numbers force you to commit to assumptions you can defend. That's why we build one before we run a venture, not after.

VISUAL The five rows highlight one at a time as Cash names them.

CASH: Five rows. Revenue at the top. Cost of goods sold below it. Gross margin in the middle — that's revenue minus COGS. Operating expenses below that. Net income at the bottom — gross margin minus OpEx.

VISUAL Each row glows in turn, with simple arithmetic between them.

CASH: Each row hides assumptions. Revenue isn't really one number — it's price times volume. Each is a guess. COGS isn't one number either — it's the cost of delivering one unit, times how many units you sell. OpEx is the fixed costs — subscriptions, ads, fees. The bottom line is just arithmetic, but every number above it is a decision.

VISUAL An expanded view shows Revenue: "$20 × 200 = $4,000," with each piece labeled as an assumption.

CASH: Here's what's interesting. The riskiest number on a P&L is almost never the one you spend the most time on. It's the one that, if you were wrong, would flip the bottom line from positive to negative. For most Grade 9 ventures, that's volume. I'll get 200 customers turns

into I got 35 customers, and the venture loses money for a year. You should know which number is your volume number, and you should know how you'd check it before betting on it.

VISUAL An arrow points at the volume figure. A "what if" toggle drops the volume to 35; the bottom line flips red.

CASH: **Here's the discipline. After you build the P&L, run two scenarios. Drop your two riskiest inputs by 30%. See what happens. Then raise them by 30%. Now you know the range you're playing in. You're not predicting. You're modeling.**

VISUAL Three columns appear — worst case, base case, best case. Net income changes across them.

CASH: **And one rule for this year. Profit isn't cash, but at this stage we don't need to worry about that yet. What we need to worry about is whether your P&L is honest. Real numbers, defensible assumptions, no hockey-stick magic. The student who turns in a P&L showing a small loss with clean reasoning will outscore the student who turns in a P&L showing a million in revenue with no math behind it. Every time.**

CLASSROOM CTA

"Build your 1-year P&L this week. Five rows, all numbers, every assumption flagged. We'll defend it Wednesday."

[Fade.]

SCRIPT

Video 5 — "Compliance Isn't the Wall, It's the Doorway" (Week 24, Mid-Unit 3)

GRADE 9 · 2:30–3:00 · CASH VOICE

Runtime target: 2:50 **Strand mapping:** ESL + MFL

VISUAL Cash at a desk with a five-row checklist. Items: Business license · Sales tax · ID-required · Age limits · PII.

CASH: I want to talk about the part of running a venture that scares people unnecessarily. Compliance. Licenses. Taxes. ID requirements. Platform age rules. Privacy. Most adults treat this stuff like a wall — like there's some big legal monster waiting to crush a small business. That's wrong. Compliance isn't the wall. It's the doorway.

VISUAL A wall labeled "FEAR" appears, then dissolves into a doorway labeled "PROCESS."

CASH: Here's a story I made up to be true. A 16-year-old runs a custom-art Etsy shop. Sells fourteen hundred dollars in a year. Doesn't register for sales tax — didn't know she had to. State sends her a letter. Back tax owed plus a small penalty. Not a disaster. Definitely fixable. But preventable in twenty minutes if she'd known up front.

VISUAL A letter drops into a mailbox. The mailbox glows briefly red.

CASH: That's the whole compliance frame. It's a knowable list. Five items. Each has a defined response.

VISUAL The five items appear, each with a checkmark animating in turn.

CASH: One. Business license. Many cities, counties, or states require one even for tiny ventures. Often free. Sometimes twenty-five dollars. The clerk's office knows the answer. Two. Sales tax. If you're selling tangible goods in most states, you collect tax from the customer and remit it to the state. You register for a seller's permit. Often free. Three. ID-required products. If you're selling alcohol, tobacco, or certain supplements — that's an adult decision and probably not a Grade 9 venture. Flag it and move on.

VISUAL Cash gestures at each item as named.

CASH: Four. Age limits on platforms. Most major marketplaces and social media require account holders to be thirteen-plus, some eighteen-plus. Read the terms of service. Run a parent-supervised account if needed. Five. PII. Personally identifiable information. Use initials in customer transcripts. Don't post your home address. Don't share customer data publicly without permission.

VISUAL A "PII" stamp appears, then a checklist with initials replacing names.

CASH: Notice what compliance is not about. It isn't ethics. A teen who didn't know about sales tax isn't a bad person; they're a person who hasn't read the form yet. Compliance is logistics. The fix is the checklist. Most teen ventures clear compliance with about an hour of work and zero dollars.

VISUAL A "1 HOUR" countdown clock appears, ticking down to zero. The doorway swings open.

CASH: One thing. If your venture wants to skirt one of these — fake age on a platform, sell something that requires ID, post personal customer data — pause. That's not compliance. That's risk you don't want.

CLASSROOM CTA

"Complete your compliance checklist for your Capstone this week. Five rows. Mark applies, what to do, who to ask, status. Bring it Friday."

[Fade.]

SCRIPT

Video 6 — "An MVP Is the Smallest Test That Could Change Your Mind" (Week 29, Unit 4 Launch)

> “You can pick what kind of business you build. It's a choice.”
>
> - CASH, GRADE 9

GRADE 9 · 2:30–3:00 · CASH VOICE

Runtime target: 2:55 **Strand mapping:** LRCI + PSIG

VISUAL Cash sitting cross-legged on the floor with a small box labeled "MVP." Around the box: a hammer, a sketch, and a phone with an email open.

CASH: I want to define a word people use wrong all the time. MVP. Minimum viable product. Most people think it means "first version of the product." It doesn't. It means the smallest test that could change your mind. Read that again. The smallest test. That could change your mind.

VISUAL The phrase animates onto the screen, with "smallest" and "change your mind" highlighted.

CASH: Here's the case I want you to think about. Warby Parker. Eyeglasses online. Founders weren't sure if anyone would buy glasses without trying them on first. So what was their MVP? Not a website. Not a store. Five frames, mailed to five customers in a home try-on box, with prepaid return. Five people. Two weeks. They watched what happened. Two of five bought.

VISUAL Five mailed boxes appear. Two come back with checkmarks.

CASH: That was enough. Two of five was their pre-committed metric for keep going. If it had been zero of five, they would have killed it. If it had been one of five, they would have iterated — change the frames, change the price, change the messaging. If it had been four of five, they'd have gone bigger. The decision was already written before the result came in.

VISUAL Three branches appear — KILL, ITERATE, SCALE — with the metric ranges next to each.

CASH: That last part is the part most people skip. They run a "test," see what happened, then decide what the result means. That's not a test. That's a vibe. A test has a what-would-have-to-be-true number written down before you start. For me to keep going, I would need at least three of five outreach attempts to result in a paid session. Specific. Pre-committed. Boring.

VISUAL A handwritten sticky note: "FOR ME TO CONTINUE, I WOULD NEED ___."

CASH: And one more thing. A good MVP has a premortem. That's where you imagine the test failed, before it runs, and list the reasons why. Some of those reasons are about the venture. Some are about the test design. If your test could fail because spring break wiped out your sample, that's a test-design problem, not a venture problem. Naming it up front means you'll know which kind of failure you got, if you get one.

CLASSROOM CTA

"This week, design your two-week MVP test. Plan template, WWHTBT metric, kill/iterate/scale rule, three-line premortem. Get a partner sign-off Friday."

[Fade.]

SCRIPT

Video 7 — "Conflict-Handling Is a Skill You Can Pick" (Week 33, Mid-Unit 4)

GRADE 9 · 2:30–3:00 · CASH VOICE

Runtime target: 2:45 **Strand mapping:** LTO

VISUAL Cash standing in front of a 2x2 grid: one axis labeled "Cooperativeness," one labeled "Assertiveness." Five styles plotted on the grid.

CASH: Let me tell you about something most leadership books overcomplicate. Conflict-handling styles. There are five. Each one is right somewhere. The skill isn't picking the "best" one. The skill is picking the right one on purpose, instead of defaulting.

VISUAL Five style names light up in turn: AVOID · ACCOMMODATE · COMPETE · COMPROMISE · COLLABORATE.

CASH: Avoid is when you sidestep the conflict. That's right when the issue is small or emotions are too hot to talk productively. It's wrong when you're avoiding an issue that won't go away. Accommodate is when you let the other person have what they want. That's right

when the issue matters more to them, or when the relationship is the thing you're protecting. It's wrong when you accommodate yourself into a venture you didn't want.

VISUAL Examples appear under "Avoid" and "Accommodate," each with a green right-fit and a red wrong-fit example.

CASH: **Compete is when you push for your position. That's right when the issue is critical, the evidence is on your side, and time is short. It's wrong when you compete because you can — because you're the loud one — instead of because the moment requires it. Compromise is when both sides give something up. That's right when stakes are moderate and you need a quick decision. It's wrong when collaboration would have produced a better outcome and you went to compromise because it was easier.**

VISUAL Same green/red pattern under "Compete" and "Compromise."

CASH: **Collaborate is when you work together to find a solution that meets both interests. That's right when the issue matters to both of you, time exists, and trust is present. It's wrong when collaboration is a fancy word for "endless meetings about something we should have just decided."**

VISUAL Under "Collaborate," a green example and a red one labeled "Endless meeting at 4pm Friday."

CASH: **Here's the move I want you to make this year. Take the self-inventory. Find your default. Most people default to one or two styles. Then notice — is your default landing right or wrong in the moments that come up? Most ninth-graders default to avoid (because high school is socially intense) or accommodate (because you're new to managing peers). Both are fine sometimes. Both are catastrophic sometimes.**

VISUAL Two students appear. One avoids a teammate's missed deadline; the venture stalls. One accommodates a partner's bad pricing call; the venture loses money. Both face palm.

CASH: **The skill is naming your style and choosing on purpose, even when the moment feels confusing. I notice I'm about to avoid this. I think this one needs collaborate. Let me try. That sentence — said in your head — is the move.**

CLASSROOM CTA

"Take the conflict-style self-inventory this week. Identify your default. Pick one style to improve. Write three small ways you'll practice it. Bring it Friday."

[Fade.]

SCRIPT

Video 8 — "Kill, Iterate, or Scale — and Why Killing Is Often the Win" (Week 36, Year-End)

GRADE 9 · 2:30–3:00 · CASH VOICE

Runtime target: 2:50 **Strand mapping:** LRCI + LTO + BAVC

VISUAL Cash at the same stool from Video 1. Behind Cash, the year's artifacts pinned to the wall: Canvas v1, Canvas v2, transcripts, P&L, MVP test plan, results sheet.

CASH: **Hey. End of the year. Take a breath. You've done a lot. Canvas, customer discovery, P&L, compliance checklist, MVP test, conflict-style work, defense. That's a real year of work, and most adults running businesses haven't done it cleanly even once.**

VISUAL Each artifact lights up briefly as Cash names them.

CASH: **I want to talk about your recommendation. Kill, iterate, or scale. By now your two-week test has come back with data. You've measured it against your what-would-have-to-be-true metric. You've made a call. I want to make a case for one of the three calls that doesn't get enough credit. Killing.**

VISUAL The word KILL appears, with a small spotlight.

CASH: **Killing a venture honestly is one of the hardest moves in business. Not because the math is hard. The math is easy. It's hard because we get attached to ideas. We invest hours, energy, identity. So when the data says "this isn't working at the level I committed to," we**

want to argue with the data. The test was unusual. The customer was wrong. I'd succeed if I just tried harder. All of that may be true sometimes. But most of the time, when the WWHTBT metric says no, the answer is no.

VISUAL A "kill" decision animates onto a sample test report with a clean signature.

CASH: **Here's the discipline. A student who kills a venture honestly, with a clear reason, scores higher on this curriculum than a student who claims to "scale" a venture they have no evidence for. The grade isn't about whether the business worked. It's about whether you ran the moves and read the data straight.**

VISUAL Two students at the defense table. One has crossed out the venture in red marker, and is presenting their reasoning. The other is presenting big plans without numbers behind them. The first one's rubric scores higher.

CASH: **Iterating is the most common right answer. Most tests come back mixed — some signal, some noise. Iteration is "I learned X, I'm changing Y, I'll test again." It's the move that compounds. Scale is rarer at this stage. If your test comes back clean and clearly above the metric, scaling is the call.**

VISUAL All three branches show example next-steps.

CASH: **One last thing. Look at your Day 1 Riskiest Assumption card. Read it. Compare it to where your Canvas is now. Some of you will see that you were wrong on Day 1, and you've corrected. Some of you will see that you were partly right. A few of you will see that Day 1 you didn't know enough to even ask the right question — and now you do. All three are wins. The point of the year wasn't to be right on Day 1. The point was to build the habit of finding out.**

VISUAL Day 1 cards return to students' hands. They read.

CASH: **A little less wrong, every week. Every year. That's the move.**

CLASSROOM CTA

"In the final Capstone Journal entry: write what you'd tell next year's Grade 9 student. Two paragraphs. Specific. Bring to the defense."

VISUAL Cash waves. Slow fade.

UPGRADE LAYER (added by Brand & SMM Director, 2026-04-25)

9-12 cross-script conventions (apply to all 8 G9 scripts): - **Signature opener:** [VISUAL: real-feeling adult-coded scene.] **CASH (Slow Lean):** "Quick check-in. Most adults run businesses on opinions. We're going to do this differently." - **Visual world:** caption-on default, vertical-friendly framing, occasional zoom-in beats, 1-frame visual freeze + brief silence on the contrarian line (no music sting — silence carries the line, per Style Guide §9). Think Hank Green, but a coin. - **Twist + concrete number** in every script. - **Shorts cut and a 60-second school-TikTok cut, both flagged.**

AN INTERLUDE · GRADE 09

"Most adults skip the step. You won't."

the band's working assumption.

Video 1 — "Entrepreneurship Is a Method, Not a Personality" — Upgrade

- **NEW HOOK:** [VISUAL: A wall of "founder personality" magazine covers. Cash lays a four-step methodology card on top of it.] **CASH:** "Quick check-in. Founders are not a vibe. They are a method."
- **Shareable Cash line:** "Entrepreneurship is a method, not a personality."
- **9-second Shorts cut:** Magazine wall → method card → "Method beats vibe."
- **60-sec TikTok cut:** the four moves explained — Canvas, 5 interviews, P&L, 2-week test.
- **Classroom CTA:** Write your Day 1 Riskiest Assumption. Specific people, specific thing, specific reason. Bring it Wednesday.

SCRIPT

Video 2 — "Customer Discovery Beats Customer Prediction" — Upgrade

- **Shareable Cash line:** "Five real interviews are still better than fifty hours of imagining."
- **9-second Shorts cut:** Lin's Canvas v1 → 5 interview cards → Canvas v2 with red dots.
- **Classroom CTA already strong.** Pre-schedule 2 interviews this week. Use the Mom Test.

SCRIPT

Video 3 — "Mapping the Riskiest Box" — Upgrade

> "Don't make up a winner. Decide what to test next."
>
> - CASH, GRADE 9

- **NEW HOOK:** [VISUAL: A 9-box BMC. Cash circles ONE box in red. Pulls it out.] **CASH:** "Quick check-in. Nine boxes. One of them will kill your venture. Find that one."

- **Shareable Cash line:** "The riskiest box is where the work goes."
- **9-second Shorts cut:** 9-box → red circle → "Find. The. One."
- **Classroom CTA:** Score every box for evidence: green / yellow / red. Pick the reddest. Plan a test.

SCRIPT

Video 4 — "A One-Year P&L Is a Thinking Tool" — Upgrade

- **NEW HOOK:** [VISUAL: A blank P&L. Cash starts filling it in — and asks "defend each line" as it appears.] **CASH:** "Quick check-in. A P&L is not a math problem. It's a paper trail of your assumptions."
- **Shareable Cash line:** "Every line in a P&L is an assumption you can defend or you can't."
- **9-second Shorts cut:** P&L lines fill in → red asterisks where defendable, yellow where hopeful.
- **Classroom CTA:** Build a 5-line P&L for one year. Defend each line in 1 sentence. Bring it Friday.

SCRIPT

Video 5 — "Compliance Isn't the Wall, It's the Doorway" — Upgrade

- **NEW HOOK:** [VISUAL: A door labeled "BUSINESS." A doorway labeled "COMPLIANCE." Cash gestures through it.] **CASH:** "Quick check-in. Compliance is not the thing standing in your way. It's the thing that lets you scale."
- **Shareable Cash line:** "Compliance isn't the wall. It's the doorway."
- **9-second Shorts cut:** Door / doorway shot → "Through. Not around."
- **Classroom CTA:** Identify ONE compliance question your venture will face. Research the answer. Bring it Wednesday.

SCRIPT

Video 6 — "An MVP Is the Smallest Test That Could Change Your Mind" — Upgrade

- **NEW HOOK:** [VISUAL: A 12-feature product mockup. Cash erases 11 features.] **CASH:** "Quick check-in. The MVP isn't the stripped-down product. It's the smallest test that could prove you wrong."
- **Shareable Cash line:** "An MVP is the smallest test that could change your mind."
- **9-second Shorts cut:** Mockup with 12 features → 1 feature → "MVP = the question."
- **Classroom CTA:** Define your 2-week MVP. Pre-commit to kill / iterate / scale rule.

SCRIPT

Video 7 — "Conflict-Handling Is a Skill You Can Pick" — Upgrade

- **NEW HOOK:** [VISUAL: Two team members glaring. Cash drops a card labeled "BEHAVIORAL CONTRACT."] **CASH:** "Quick check-in. The team isn't broken. The agreement is missing."
- **Shareable Cash line:** "Conflict isn't a personality problem. It's a missing agreement."
- **9-second Shorts cut:** Glaring → contract → handshake.
- **Classroom CTA:** Update your team charter with one specific behavior. Bring it Friday.

Video 8 — "Kill, Iterate, or Scale — and Why Killing Is Often the Win" — Upgrade

- **NEW HOOK:** [VISUAL: A fork in the road with three paths.] **CASH:** "Quick check-in. Most adults can't kill an idea. The ones who can — build the next one faster."
- **Shareable Cash line:** "Killing is sometimes the win."
- **9-second Shorts cut:** Three paths → KILL highlighted → "Killing fast = next idea sooner."
- **Classroom CTA:** Year-end decision: kill, iterate, or scale your venture. Defend your call.

VISUAL Cash to Company logo. "Don't model on luck. Model on the moves."

ENDNOTES & STANDARDS

Citations and alignment

Grade 9 cites 3-6 standards across CCSS, Jump$tart, CEE, CASEL, and C3 frameworks. Detailed alignment lives in the master Standards Alignment Map.

1. **Jump$tart Coalition Personal Finance Standards (2021 ed.).** Spending and Saving; Credit and Debt; Employment and Income; Investing; Risk Management and Insurance; Financial Decision Making.
2. **Council for Economic Education (CEE).** Voluntary National Content Standards in Economics.
3. **CCSS-ELA, Grades 11-12.** W.11-12.1, W.11-12.4, SL.11-12.1, SL.11-12.4, RST.11-12.7.
4. **CCSS-Math.** N-Q.1-3 (Reasoning with Quantities), S-IC (Statistics & Inferences), F-IF (Functions), MP.4 (Modeling).
5. **CASEL Core Competencies.** Self-Awareness, Self-Management, Social Awareness, Relationship Skills, Responsible Decision-Making.
6. **C3 Framework for Social Studies State Standards.** Dimension 2 (Economics, Civics) at the high-school grade band.
7. **NGSS-ETS Engineering Practices.** ETS1 (Engineering Design) for the test-and-iterate spine of the year.
8. **Cash to Company Master Scope & Sequence.** 13 grades x 8 strands x 36 weeks; outcomes quoted verbatim from _master/00_Master_Scope_and_Sequence.md.
9. **Cash Mascot Style Guide.** 9-12 voice rules: multi-sentence arguments; vocabulary includes unit economics, runway, premortem, MVP; never flatters, never promises wealth.
10. **Sensitivity protocol.** No probing of family finances; financial scenarios framed as hypothetical for a sample household, business, or scenario.

One promise.

Cash to Company makes one promise: students who move t
program will be clearer thinkers about money and entrepren
matter what they end up doing for a living.

We do not promise wealth. We do not promise success. We pro

> **“From flash of inspiration to repeatable discipline.”**
