GRADE 09 · CURRICULUM BOOK

The Year, Architect

From flash of inspiration to repeatable discipline.

9

Year theme: Entrepreneurship is organized problem-solving **Grade band:** 9-12 (high school, first year of the band) **Total instructional time:** ~36 weeks · 90–180 minutes per week (one block + one short follow-up; or two periods) **Anchor mascot:** Cash, the program's animated host (now in 9-12 voice)

WITH CASH - 9-12 VOICE

"You can pick what kind of business you build. It's a choice."

Why this year

YEAR ARC - PROJECT INTENSITY BY UNIT

Intensity = student artifacts produced + cash-flow stakes + team interdependence.

> "Don't make up a winner. Decide what to test next."
>
> - CASH, GRADE 9

Ninth graders are in transition. Most have left the structured-from-above world of middle school and just landed in a building where adults expect them to manage their own time, their own work, and — increasingly — their own decisions. That same expectation is what makes them ready for the central move of Grade 9: treating entrepreneurship not as a flash of inspiration, but as a discipline. A repeatable set of moves you can run, even on a Tuesday when nothing feels inspired.

Grade 8 ended with students running a 4-week project plan, holding a break-even number, and closing a Plan-Do-Study-Act cycle. Grade 9 takes those operating muscles and stretches them across a real business — not a poster, not a classroom-store simulation, but a Business Model Canvas with evidence in every box, a one-year P&L with honest numbers, and a 2-week MVP test that ends in a kill, iterate, or scale recommendation. The customer-discovery

cycle is the year's spine: five real interviews (or recorded surrogates), coded patterns, and a written record of what changed in the founder's hypothesis.

The financial spine of the year is the **one-year P&L**: revenue, COGS, gross margin, operating expenses, net income — each line connected to a real assumption that can be checked. The discipline spine is **customer discovery**: the practice of starting wrong on purpose, going to find out, and writing down what changed.

Grade 9 is the first year of the 9-12 band. That matters. The band's vocabulary changes — unit economics, runway, premortem, MVP, segmentation — and Cash's voice gets longer and more argumentative. We expect multi-sentence reasoning. We expect students to defend a position with evidence and concede uncertainty when they don't have it. The middle-school version of "tell me what you think" gives way to the high-school version: "Show me the evidence."

The big ideas (Understanding by Design — Stage 1)

These are the year's load-bearing understandings. Every unit, lesson, and assessment can be traced to one or more of them.

1. **Entrepreneurship is a method, not a personality.** The disciplined moves — interview, model, test, decide — work whether or not you feel "entrepreneurial" on a given day.
2. **A business model has nine boxes for a reason.** Each box (customers, value prop, channels, relationships, revenue, key activities, resources, partners, costs) holds an assumption. The Canvas exists so you can see which assumptions you've checked and which you've imagined.
3. **Customer discovery beats customer prediction.** Five real interviews, coded honestly, will rewire your hypothesis more than fifty hours of imagining will.
4. **A one-year P&L is a thinking tool.** It forces you to commit to numbers — and the numbers force you to commit to assumptions you can defend.
5. **An MVP is the smallest test that could change your mind.** It's not a v1. It's not a launch. It's the cheapest experiment that would tell you whether to continue.
6. **Compliance is a knowable list.** Business license, sales tax, ID-required products, age limits, PII protection — each one has a defined response. You don't get to skip them; you do get to plan for them.
7. **Conflict-handling is a skill you can pick.** Avoid, accommodate, compete, compromise, collaborate — five named styles, each with a use case. Self-awareness is choosing the right one on purpose, not defaulting.

Essential questions (returned to all year)

- Which people, and how do you know? (The program's spine question, escalated.)
- What assumption in your Canvas would, if wrong, sink the whole thing?
- What would have to be true for your P&L to actually happen?
- What's the smallest test that could change your mind?
- Which of these compliance items applies to your venture, and what are you going to do about it?
- When you and a teammate disagree, what's your default — and is it the right move here?

Year-at-a-glance

The year is built as four units. Each unit ends with a public-facing artifact and feeds the rolling Capstone — the Organized Problem-Solving Venture — that students refine across the year.

Unit	Weeks	Title	Big idea	Anchor artifact
1	1–8	Map the model	A business model has nine boxes for a reason.	A complete Business Model Canvas v1 with evidence (or a labeled assumption flag) in each of the nine boxes.
2	9–18	Discover the customer	Customer discovery beats customer prediction.	A Customer Discovery Pack: 5 interviews coded, a pattern memo, and a written hypothesis revision (Canvas v2).
3	19–28	Model the money	A one-year P&L is a thinking tool.	A 1-year P&L pack: revenue model, COGS, gross margin, operating expenses, net income, with a 2-scenario sensitivity.
4	29–36	Test the bet	An MVP is the smallest test that could change your mind.	A 2-week MVP test: hypothesis + "what would have to be true" metric + results + kill / iterate / scale recommendation.

The Capstone (the Organized Problem-Solving Venture) threads all four units. Students build a BMC, sharpen it with five real interviews, model the money, run a 2-week MVP test, and present the result with an honest recommendation. The Final Defense in Week 36 is graded on the Pitch Presentation rubric (9-12 band — full Q&A).

The eight strand outcomes (verbatim from Master Scope)

Grade 9 is the ninth row of the Cash to Company K-12 grid. Every cell below is a specific, measurable outcome a student can demonstrably do by year's end. These are quoted exactly from the Master Scope and Sequence — never paraphrased.

- **BAVC.** I can map a Business Model Canvas for a real venture (9 boxes: customers, value prop, channels, relationships, revenue, key activities, resources, partners, costs) with evidence in each.
- **PSIG.** I can run a customer-discovery cycle with 5 real interviews (or recorded surrogates), code the patterns, and write what changed in my hypothesis.
- **MFL.** I can build a simple one-year P&L (income statement) for a venture with revenue, COGS, gross margin, operating expenses, and net income.
- **CBM.** I can write a positioning statement using the form "For [target] who [need], [product] is the [category] that [unique benefit] because [reason]."
- **OSO.** I can break a venture into 3–5 functional areas, write objectives for each, and identify dependencies between them.
- **LTO.** I can identify my own conflict-handling style (avoid, accommodate, compete, compromise, collaborate) and pick one I want to improve, with a plan.
- **ESL.** I can identify which of these apply to a venture: business license, sales tax, ID-required products, age limits, PII protection — and what to do about each.
- **LRCI.** I can run a 2-week MVP test with a defined "what would have to be true" success metric, and write a kill/iterate/scale recommendation.

Each unit braids 3–4 strands. Unit 1 anchors BAVC and OSO with supporting beams from CBM (the "value prop" and "channels" boxes); Unit 2 centers PSIG with strong support from CBM (positioning emerges from interviews) and LTO (interviewing teaches conflict-aware listening); Unit 3 centers MFL with BAVC (every P&L line ties back to a Canvas box) and ESL (sales tax and licensing show up first as line items); Unit 4 braids LRCI, OSO, and ESL together at MVP-test time, with LTO showing up in the team retrospective.

Vocabulary roadmap (20–25 terms)

> **“Most adults skip this step. You won't.”**
>
> - CASH, GRADE 9

Vocabulary in Grade 9 expands sharply. The 9-12 band's signature terms — unit economics, runway, premortem, MVP, segmentation — get introduced early and recycled across units. Students keep the Vocabulary Spine they brought from Grade 8 and add a Frayer entry for each "weight-bearing" term.

Unit 1 (model and structure vocabulary): Business Model Canvas (BMC), value proposition, channel, customer relationship, revenue stream, key activity, key resource, key partner, cost structure, hypothesis, assumption flag.

Unit 2 (discovery vocabulary): customer discovery, recorded surrogate, code, pattern, segmentation, positioning statement, jobs-to-be-done, in-the-room (vs. on-paper) customer.

Unit 3 (financial modeling vocabulary): revenue, COGS (cost of goods sold), gross margin, operating expenses, net income, unit economics, sensitivity, scenario, runway, sales tax, business license.

Unit 4 (test and decision vocabulary): MVP (minimum viable product), what-would-have-to-be-true, kill / iterate / scale, conflict-handling style (avoid · accommodate · compete · compromise · collaborate), retrospective, premortem, PII (recycled from Grade 8).

Total: ~25 named terms across the year, plus all Grade 7–8 terms recycled in context.

AN INTERLUDE · GRADE 09

"Which people, and how do you know?"

the program's spine question.

1

Anchor texts

A mix of short readings, video, and case studies. None require purchase; school-friendly substitutes provided.

- Business Model Generation (Osterwalder & Pigneur) — teacher-mediated 3-page summary of the 9 boxes; the foundation of Unit 1.
- The Mom Test (Rob Fitzpatrick) — student-friendly 2-page summary of how to interview customers without leading them; backbone of Unit 2.
- A short kid-curated case on **Warby Parker** (their original "test the home try-on with five customers" story) — used to surface MVP discipline.
- The Lean Startup (Eric Ries) — extended summary, picking up where Grade 8's PDSA introduction left off; introduces the kill/iterate/scale framing.
- A 1-page extract from **Sara Blakely's early Spanx interviews** (public-domain version) — used to surface "I started wrong, and then I went and asked."
- A short case on a teen-run venture that hit a **compliance bump** — sales tax owed retroactively, or an ID-required product sold without verification (anonymized — provided in assets) — used in Unit 3 ESL.
- One Cash video per unit launch + four mid-unit videos (8 across the year — see the Video Scripts file).

Project arc — the Organized Problem-Solving Venture (Capstone)

Across the year, each student (or pair) develops one venture they'd genuinely consider running. A venture can be a real micro-business, a service, an event, a content product, or a not-for-profit. The Capstone has four checkpoints, one per unit:

- **End of Unit 1 (Week 8): Canvas Pack** — Business Model Canvas v1 with evidence (or labeled assumption flag) in each of 9 boxes; a 1-page memo explaining the riskiest assumption.
- **End of Unit 2 (Week 18): Customer Discovery Pack** — 5 interview transcripts (initials only), pattern coding, positioning statement, and Canvas v2 with the changes from interview evidence highlighted.
- **End of Unit 3 (Week 28): Money Model Pack** — 1-year P&L with revenue model, COGS, gross margin, OpEx, net income; 2-scenario sensitivity; compliance checklist (license, tax, ID, age, PII).

- **End of Unit 4 (Week 36): MVP Test Pack** — 2-week test plan with "what would have to be true" metric, results, kill/iterate/scale recommendation, team retrospective with conflict-style reflection. Final Defense follows.

Students choose the venture in Week 2. Optional pivot windows in Weeks 9, 19, and 29 allow students to switch ventures if evidence demands it. Building on Grade 7–8 ventures is encouraged — a student who took a snack venture through middle school can extend it here, now with a BMC and a P&L on top.

Assessment philosophy

We assess two things at every checkpoint:

1. **Did the student do the work the standard names?** Did they actually map the Canvas with evidence? Did they actually run 5 interviews? Did they actually model a P&L? Did they actually run a 2-week test?
2. **Did the student think about it?** Can they explain the riskiest assumption in their Canvas? Can they identify what their interviews could not tell them? Can they defend a kill/iterate/scale recommendation under pushback?

The five rubrics in the Rubric Bank are the spine. The Business Plan Rubric anchors Unit 1 (Canvas) and Unit 4 (MVP test plan). The Customer Research Rubric anchors Unit 2's Discovery Pack with the higher 9-12 bar (5+ interviews, formal coding, segmentation). The Budget Project Rubric anchors Unit 3's P&L. The Pitch Presentation Rubric (9-12 — full Q&A) grades the Final Defense. The Reflection Writing Rubric grades end-of-unit memos and the Capstone Journal portfolio.

Differentiation in Grade 9

- **ELL.** The Business Model Canvas is language-dense (every box has a noun phrase that's hard to translate cleanly). Provide pre-translated Canvas templates with cognate hints. For interviews, allow native-language conversations with English summary; require English in the final Discovery Pack. The P&L is forgiving — math is universal — but the line item names benefit from a glossary.
- **IEP/504.** Allow voice-recorded interviews with transcription support. Provide structured Canvas and P&L templates with one box/line per page. Reduce interview count from 5 to 3 if appropriate, with a written rationale (and supplement with two recorded surrogates from the program's interview library). Calculator and spreadsheet tools allowed throughout.
- **Advanced learners.** Push toward two-segment Canvases (a primary and a secondary customer, with different value props). Add a unit-economics layer: contribution margin per customer × expected customer count, compared against fixed costs. For the MVP test,

require a written premortem before the test starts. Peer-teaching role in Grade 7 (interviewing) and Grade 8 (break-even) classrooms is an excellent challenge — and previews Grade 11 leadership work.

Sensitivity considerations specific to this year

> **“You can pick what kind of business you build. It's a choice.”**
>
> **- CASH, GRADE 9**

Per program-wide policy, the curriculum never asks students about family money, family debts, or family financial status. Sensitivity flags at this grade band include:

- **The "real venture" pull.** Some 9th graders will want to start an actual business this year. The curriculum supports this as a family decision, not as a curriculum requirement. The Capstone can be done entirely on paper (or with simulated transactions) and earn a 4 on every rubric. If a student wants to launch real, they'll do so with family permission, age-appropriate platforms, and the compliance checklist they'll build in Unit 3.
- **PII and online platforms.** Many Grade 9 ventures will involve social media or e-commerce. The Unit 3 compliance work surfaces this. The teacher's job is to surface the risks (age limits on platforms, what NOT to post about yourself, what counts as PII), not to police the family decision. **SENSITIVITY FLAG:** if a student starts disclosing personal details about themselves in a public test environment (full name, address, school name, photo), pause. Coach toward initials, generic descriptors, and a parent conversation. Direct the family to the Parent Guide.
- **Compliance fear.** The licensing/tax/ID/age conversation can scare students away from the work. Frame it the way real founders frame it: a knowable list, with a defined response per item. Most ventures students design at this level need a state seller's permit (often free), basic sales tax registration (free or low-cost), and good judgment on age-restricted products. Cash uses the line: "Compliance isn't the wall. It's the doorway."
- **Conflict and identity.** The conflict-handling-style work (LTO) can surface real friction. Coach students that style is not worth — somebody who avoids conflict is not "weak"; somebody who competes is not "rude." The frame is: which style fits which moment, and which one are you defaulting to that you wish you could choose more deliberately?
- **Real money requests.** If a student's family wants to fund a real launch ($40 in supplies, $25 in ad spend), that's a family conversation. The rubric does not reward "real" launches over "paper" ones; it rewards rigor.

Materials and tools (year)

- Notebooks (paper or digital) for the Vocabulary Spine and Capstone Journal.
- Business Model Canvas template (provided — paper version + spreadsheet version).
- Interview script template + interview transcript form (provided; recycle from Grade 7 with a 9-12 update).
- One-year P&L template (provided — paper version + spreadsheet version with formulas).
- Compliance checklist template (license, sales tax, ID, age, PII — five rows, with state-specific links pinned by teacher).
- 2-week MVP test plan template (provided).
- Conflict-handling style self-inventory (provided — adapted from Thomas-Kilmann at age-appropriate level).
- Access to one Cash short video per milestone (8 total).
- Access to a spreadsheet tool (Google Sheets, Excel for Web) — at this band, this is no longer optional. Students who don't have home access need protected school-time access.

How this year hooks into the rest of Cash to Company

- **Reaches back to Grade 8.** Grade 8 ended with break-even, A/B test, 4-week project plan, and a closed PDSA cycle. Grade 9 picks each one up: break-even becomes the bottom of the P&L the A/B test discipline transfers to MVP testing; the 4-week project plan becomes the OSO functional breakdown; the PDSA cycle is the operating system underneath the MVP test. Strong Grade 8 work makes Grade 9 feel like an extension, not a step up.
- **Reaches forward to Grade 10.** Grade 10's theme is "Ownership structure, money, and compliance." Grade 9 plants every seed. The Canvas's "key partners" and "key resources" boxes set up sole prop vs. LLC. The compliance checklist sets up Grade 10's full structure decision. The premortem (introduced lightly in Grade 9 Unit 4) becomes Grade 10's core PSIG move. The funding-source comparison (Grade 10 MFL) builds directly on the Grade 9 P&L's "what does this need to start?"
- **Vertical strands.** Each of the eight strands has a Grade 9 outcome (see the Master Scope). The four units braid them together — Unit 4, in particular, lights up six of the eight strands at once.

AN INTERLUDE · GRADE 09

"Most adults skip the step. You won't."

the band's working assumption.

2

Standards alignment (centered for Grade 9)

The year explicitly centers the following benchmarks (copied verbatim from the Standards Alignment Map):

- **Jump$tart Standard 1 (Spending and Saving), Benchmark 12-1:** Develop a plan for spending and saving — extended to a venture P&L.
- **Jump$tart Standard 3 (Employment and Income), Benchmark 12-3:** Explain how taxes, government transfer payments, and employee benefits relate to disposable income — touched at survey level.
- **CEE Standard 1 (Earning Income), Grade 12:** Entrepreneurs accept the risks in organizing resources to produce goods and services and hope to earn profits.
- **CCSS-Math A-CED.A.2:** Create equations in two or more variables — used in P&L modeling.
- **CCSS-Math S-IC.B.4:** Estimate from a sample — applied to 5-interview customer discovery.
- **CCSS-ELA W.9-10.7 / RST.9-10.7:** Conduct research and integrate technical information — central to discovery cycle.
- **CCSS-ELA SL.9-10.4:** Present findings clearly and concisely.
- **C3 D2.Eco.2.9-12:** Use marginal benefits and marginal costs to construct an argument — directly used in MVP go/no-go.
- **NGSS-ETS HS-ETS1-2:** Design a solution to a complex real-world problem by breaking it down into smaller, more manageable problems.
- **CASEL Responsible Decision-Making:** Analyze consequences of various actions for personal, social, and collective well-being.

A note to first-time teachers of this curriculum

You don't need to have run a business to teach Grade 9. You do need to be willing to enforce three norms: every Canvas box must show evidence or be flagged as an assumption, every P&L line must be defended with a number-and-reason, and every MVP test must end with a kill/iterate/scale recommendation that the student would actually act on. Cash, in the videos, will model the questions. Your job is to ask them — every time — in the room. By Week 12, students will ask each other.

The biggest pedagogical move you can make in Grade 9 is honoring "I don't know yet — here's how I'd find out." That sentence is the heartbeat of customer discovery. When a student says "I think customers will want X," your move is: "Which people, and how do you know? What would you do this week to find out?" When a student writes a P&L line of $40,000 in revenue and you ask why, the right answer is "200 customers × $200, and here's

why I think 200 customers — six interviews said this." The wrong answer is silence, or "it felt right." Coach the right answer; don't fake the wrong one.

One more thing. Cash's voice shifts this year. The middle-school Cash was warm and direct. The high-school Cash is still warm — but more argumentative. Cash will say things like "You'll meet adults who skipped this part and got lucky. Don't model your career on luck. Model it on the moves." Don't soften that. The 9-12 band is built to handle multi-sentence reasoning, and the program's ethical spine — that we're building clearer thinkers, not making promises — is most clearly visible in this voice. Lean into it.

Senior expert upgrade pack — Grade 9

> **“Some of this is hard because the world's hard. The skill is knowing what's in your hands.”**
>
> - CASH, GRADE 9

Cross-grade bridge sharpening

Add to "Why this year" (open): "Grade 8 ended with a break-even number, a 4-week project plan, and a closed PDSA cycle. Grade 9 takes those operating muscles and applies them to a real business model — a 9-box BMC with evidence in every box, a 1-year P&L with honest numbers, and a 2-week MVP test that ends in a real recommendation. The BMC you build this year is the input for next year's ownership-structure work."

This makes the Grade 9 → Grade 10 hand-off explicit.

Multi-class branching scenario — "Two BMCs from last year's class"

A 1-day branching scenario for Unit 2 (discover the customer).

- **Setup.** Distribute two anonymized BMCs from past student work. BMC A: kept the assumptions in the customer box; ran an MVP and killed (the customer didn't show up). BMC B: ran 5 interviews; revised the customer box; iterated.

Class question: "Read both. What was the assumption that broke in BMC A? Where in BMC B did the interviews change the box?"

Pair-share, then trio-share. Then write a 3-sentence response in the journal.

- **Pivot.** "What's the assumption in YOUR BMC most like A's? What would have to be true for it to break?" Each student names their riskiest assumption.

This scenario practices BAVC (BMC reading), PSIG (customer discovery), LRCI (kill/iterate decisions). Repeatable each unit.

Contracts basics — a half-lesson add (real venture readiness)

Real high school freshmen who actually start ventures hit one contract type fast: the service agreement (a one-page "I'll do X for $Y, due Z, with these terms"). The current curriculum doesn't teach this. Add a half-lesson reference to Unit 4 — see Lesson Plans upgrade pack.

ROUND 2 PATCH — Standards Citations (verbatim)

- **Jump$tart Standard 1 (Spending and Saving), Benchmark 12-1:** "Develop a plan for spending and saving" — extended to a venture P&L.
- **Jump$tart Standard 3 (Employment and Income), Benchmark 12-3:** "Explain how taxes, government transfer payments, and employee benefits relate to disposable income" — touched at survey level.
- **CEE Standard 1 (Earning Income), Grade 12:** "Entrepreneurs accept the risks in organizing resources to produce goods and services and hope to earn profits."
- **CCSS-Math A-CED.A.2:** "Create equations in two or more variables" — used in P&L modeling.
- **CCSS-Math S-IC.B.4:** "Estimate from a sample" — applied to 5-interview customer discovery.
- **CCSS-ELA W.9-10.7 / RST.9-10.7:** "Conduct research and integrate technical information" — central to discovery cycle.
- **CCSS-ELA SL.9-10.4:** "Present findings clearly and concisely."
- **C3 D2.Eco.2.9-12:** "Use marginal benefits and marginal costs to construct an argument" — directly used in MVP go/no-go.
- **NGSS-ETS HS-ETS1-2:** "Design a solution to a complex real-world problem by breaking it down into smaller, more manageable problems."
- **CASEL Responsible Decision-Making:** "Analyze consequences of various actions for personal, social, and collective well-being."

ROUND 2 PATCH — Strand Outcomes (verbatim)

By end of Grade 9, a student can: - **BAVC:** "I can map a Business Model Canvas for a real venture (9 boxes: customers, value prop, channels, relationships, revenue, key activities, resources, partners, costs) with evidence in each." - **PSIG:** "I can run a customer-discovery cycle with 5 real interviews (or recorded surrogates), code the patterns, and write what

changed in my hypothesis." - **MFL:** "I can build a simple one-year P&L (income statement) for a venture with revenue, COGS, gross margin, operating expenses, and net income." - **CBM:** "I can write a positioning statement using the form For [target] who [need], [product] is the [category] that [unique benefit] because [reason]." - **OSO:** "I can break a venture into 3–5 functional areas, write objectives for each, and identify dependencies between them." - **LTO:** "I can identify my own conflict-handling style (avoid, accommodate, compete, compromise, collaborate) and pick one I want to improve, with a plan." - **ESL:** "I can identify which of these apply to a venture: business license, sales tax, ID-required products, age limits, PII protection — and what to do about each." - **LRCI:** "I can run a 2-week MVP test with a defined what would have to be true success metric, and write a kill/iterate/scale recommendation."

ROUND 2 PATCH — Cross-Grade Bridge: Grade 9 → Grade 10 (FORWARD bridge, REQUIRED)

You spent this year mapping a Business Model Canvas for a real venture. **The BMC you built is the input for next years categorization work.** In Grade 10, your teacher will hand you back the BMC and ask: is this a hobby, a side venture, a small business, or a startup? The answer is in your evidence boxes. Bring the BMC forward.

ROUND 2 PATCH — Advanced-Learner Specifics (Grade 9)

- **BMC extension:** Build BMCs for two ventures and identify which one is more validated by evidence. Defend.
- **Customer-discovery extension:** Run interviews in two languages if applicable, and discuss whether the responses differed.
- **P&L extension:** Build a 3-year P&L (years 1, 2, 3) with reasonable growth assumptions. Discuss which numbers are most uncertain.
- **MVP extension:** Run two MVP tests in parallel — different assumptions, different metrics. Discuss which one taught more.

ENDNOTES & STANDARDS

Citations and alignment

Grade 9 cites 3-6 standards across CCSS, Jump$tart, CEE, CASEL, and C3 frameworks. Detailed alignment lives in the master Standards Alignment Map.

1. **Jump$tart Coalition Personal Finance Standards (2021 ed.).** Spending and Saving; Credit and Debt; Employment and Income; Investing; Risk Management and Insurance; Financial Decision Making.
2. **Council for Economic Education (CEE).** Voluntary National Content Standards in Economics.
3. **CCSS-ELA, Grades 11-12.** W.11-12.1, W.11-12.4, SL.11-12.1, SL.11-12.4, RST.11-12.7.
4. **CCSS-Math.** N-Q.1-3 (Reasoning with Quantities), S-IC (Statistics & Inferences), F-IF (Functions), MP.4 (Modeling).
5. **CASEL Core Competencies.** Self-Awareness, Self-Management, Social Awareness, Relationship Skills, Responsible Decision-Making.
6. **C3 Framework for Social Studies State Standards.** Dimension 2 (Economics, Civics) at the high-school grade band.
7. **NGSS-ETS Engineering Practices.** ETS1 (Engineering Design) for the test-and-iterate spine of the year.
8. **Cash to Company Master Scope & Sequence.** 13 grades x 8 strands x 36 weeks; outcomes quoted verbatim from _master/00_Master_Scope_and_Sequence.md.
9. **Cash Mascot Style Guide.** 9-12 voice rules: multi-sentence arguments; vocabulary includes unit economics, runway, premortem, MVP; never flatters, never promises wealth.
10. **Sensitivity protocol.** No probing of family finances; financial scenarios framed as hypothetical for a sample household, business, or scenario.

One promise.

Cash to Company makes one promise: students who move t
program will be clearer thinkers about money and entrepren
matter what they end up doing for a living.

We do not promise wealth. We do not promise success. We pro

“From flash of inspiration to repeatable discipline.”
