GRADE 11 · CASH VIDEO SCRIPTS

# Eight Scripts. One Cash.

**Leading three people, listening to one customer, executing six weeks.**

11

**Eight short videos. Roughly one per major unit beat.** Each script targets 2:30–3:00 of runtime, 350–420 words spoken. Cash voice is 9-12: multi-sentence arguments, honest about uncertainty, no hype. Each script ends with a clear classroom CTA.

WITH CASH - GRADE 11 SCRIPT SET

"Eight scripts, one Cash. Each ends in a CTA you can teach Wednesday."

SCRIPT

# Video 1 — "Leadership Without Authority" (Week 1, Unit 1 launch)

> “You can pick what kind of business you build. It's a choice.”
>
> - CASH, GRADE 11

GRADE 11 · 2:30–3:00 · CASH VOICE

**Runtime target:** 3:00 **Strand mapping:** LTO + Year frame **Word count target:** 380

**VISUAL** Cash sitting on the corner of a slightly more grown-up desk than usual. A small whiteboard behind reads: "Lead = name what's true, name what's next, name who owns it."

**CASH:** Welcome to junior year of Cash to Company. I want to start by telling you something that might land funny, because it lands funny when adults hear it too. Leadership at sixteen is mostly not what the movies say it is.

**VISUAL** A montage of clichéd movie-leader moments — fist in the air, slow walk down a hallway. Each one fades.

**CASH:** Leadership at this age is mostly clarity. Naming what's true. Naming what's next. Naming who owns it. That's the whole job most weeks.

**VISUAL** Three index cards stack: WHAT'S TRUE — WHAT'S NEXT — WHO OWNS IT.

**CASH:** Here's the thing this year is built around. You're going to lead three people for four weeks. Not because you have a title. You don't. You're not the boss. You're a teammate who's going to take a turn keeping the team's agreements.

**VISUAL** Three small figures, equal-sized, side by side.

**CASH:** That sounds simple. It is not easy. It will surface, in week three, that one of you is doing more work, that one of you is doing different work, and that what you said you'd do at the kickoff and what's actually happening are not the same thing. That's normal. That's the whole curriculum.

**VISUAL** A team kickoff scene fading into a Week 3 chaos scene with sticky notes flying.

**CASH:** Here's what good leaders at this age actually do. They write a charter. A charter is a one-page agreement about who decides what, how you handle disagreements, and what each person is bringing. That sounds boring. It is the most important page you'll write in Unit 1.

**VISUAL** A clean charter template appears, slowly fills with handwriting.

**CASH:** They run a thing called a 1:1. That's a ten-minute structured conversation with one teammate. Wins. Stuck on. A question. What you need. They run those weekly. Most adults skip these. The ones who don't have better teams.

**VISUAL** Two seated figures, one talking, one listening, with the four prompts on a card between them.

**CASH:** And they run a retrospective. After four weeks, they sit down and ask: what should we continue, stop, start, decide. They don't pretend everything went well. They don't blame each other. They name the system that made the wrong thing easy and they fix the system.

**VISUAL** Four-column board: CONTINUE / STOP / START / DECIDE.

**CASH:** Most of leadership at sixteen is keeping three agreements with three people for four weeks. That's a learnable skill. It's not about who you are. It's about what you do, on Tuesday, when the work is dull and your teammate is behind. And it's the spine of the year. Pick a teammate this week. Practice the moves.

**CLASSROOM CTA**

"This week: write your Day 1 Leadership Stance — three concrete behaviors you'll bring to your team. Behaviors, not adjectives. Bring it Friday."

[Cash gives a small nod. Fade.]

SCRIPT

# Video 2 — "The First 1:1 (And Why Most Adults Get It Wrong)" (Week 4, Unit 1 mid)

GRADE 11 · 2:30–3:00 · CASH VOICE

**Runtime target:** 2:50 **Strand mapping:** LTO **Word count target:** 370

**VISUAL** Cash sitting across a small table from another small character. Coffee cups. A 4-prompt card on the table.

**CASH:** I want to talk about a conversation that, run well, makes a team. Run badly, it kills a team slowly. It's called a one-on-one. A 1:1. Most adults get them wrong. Let me show you how.

**VISUAL** Two figures. Speech bubbles full of bullet points labeled STATUS, STATUS, STATUS.

**CASH:** Here's the wrong version. Two people sit down. Both of them dump status. "I did this, then I did this, then I did this." Then it's the other person's turn. They dump status back. Twenty minutes pass. Both people leave knowing what the other person did. Neither one of them learned anything they didn't already know.

**VISUAL** Both characters wave goodbye, looking the same as when they sat down.

**CASH:** That's not a 1:1. That's a status meeting with two people. The point of a 1:1 is for the listener to learn something they didn't know. Specifically: where their teammate is stuck, what their teammate needs, and what their teammate is afraid to say in the team meeting.

**VISUAL** Three new bubbles appear: STUCK — NEED — AFRAID TO SAY.

**CASH:** The frame is four prompts. Wins this week. What you're stuck on. A question for me. What you need from me next week. That's it. Five minutes per direction. Ten minutes total.

**VISUAL** Card flips through the four prompts in sequence.

**CASH:** Here's the move that separates the people who run good 1:1s from the ones who don't. When your teammate says "I'm stuck on X," your job is not to solve X. Your job is to ask one more question that gets at what's actually under X. Most "I'm stuck on the customer interview" really means "I'm scared to ask people a question and have them say no." Until you hear that, you can't help.

**VISUAL** A speech bubble peels back to reveal a smaller bubble underneath.

**CASH:** And here's the harder move. When you're the one being asked, name what you're actually stuck on. Not the surface version. The under-the-surface version. That takes trust. Your team builds it one 1:1 at a time. By the fourth one, you'll notice you're saying things you wouldn't have said in week one.

**VISUAL** A small "trust" meter ticks up by one mark.

**CASH:** Most adults skip these because they feel awkward. They are awkward. The silence after "what are you stuck on" lasts a few seconds longer than feels normal. That's the work. The teammate who fills that silence with the truth instead of a status update is the teammate who's actually leading. Run them anyway.

**CLASSROOM CTA**

"This week: run a 10-minute 1:1 with one teammate. Use the 4 prompts. Write down one thing you learned about them you didn't know before."

[Cash gives a small nod. Fade.]

SCRIPT

# Video 3 — "Discovery Is More Than Half" (Week 10, Unit 2 launch)

**GRADE 11 · 2:30–3:00 · CASH VOICE**

**Runtime target:** 2:55 **Strand mapping:** CBM **Word count target:** 380

**VISUAL** Cash standing next to a stopwatch icon split into two sides: LISTEN (60%) and TALK (40%).

**CASH:** I want to tell you something that goes against almost every TV sales scene you've ever watched. The best part of a sales conversation is the part where the seller is listening.

**VISUAL** A montage of TV-style salespeople doing big-energy pitches. Each one fades.

**CASH:** In the movies, the salesperson talks fast, says clever things, makes a smooth ask, and the customer signs. In reality, that conversation almost never closes. The conversation that closes is the one where the customer leaves saying "wow, that person actually understood my situation."

**VISUAL** Two thought bubbles. One: "they sold to me." Other: "they understood me."

**CASH:** Here's the rough rule. In a great sales conversation, the seller is talking less than half the time. Closer to forty percent. Discovery — the part where the seller is asking questions and listening — is more than half. Most beginners flip this. They go in with a pitch ready to deploy and they deploy it.

**VISUAL** A bar chart. "Beginner": 80% talk, 20% listen. "Pro": 40% talk, 60% listen.

**CASH:** What does great discovery look like? It's four layers. Situation: walk me through how you currently handle this. Pain: what's the most annoying part of that. Goal: if you woke up Monday and this was solved, what's different. Constraints: what can't change.

**VISUAL** A four-layer stack: SITUATION — PAIN — GOAL — CONSTRAINTS.

**CASH:** Notice none of these are leading. None of them assume the customer needs your thing. They are all designed to let the customer say what's actually true for them. Even if that's "I'm not the right customer for this." Especially that.

**VISUAL** A speech bubble: "Honestly, I don't think I need this." Cash nods.

**CASH:** Here's the move that separates good sellers from manipulative ones. A good seller is willing to hear a no, repeat it back, and respect it. A manipulative seller is afraid of no, and they'll talk over the customer to avoid hearing it. The discipline is to let the customer speak even when what they're saying isn't going your way.

**VISUAL** A timer counting silence. The seller waits. The customer fills the silence.

**CASH:** One more move. When the customer says something that surprises you, don't move on. Repeat it back. "So you're saying X — did I get that right?" That single sentence does two

things. It tells them you were listening. And it gives them a chance to correct you while it's still cheap. Both matter.

**VISUAL** Speech bubble: "So you're saying X — did I get that right?"

**CASH:** Discovery is more than half the conversation. The presenter and the closer get the credit. The discoverer makes the sale possible.

**CLASSROOM CTA**

"This week: write 7 discovery questions for your Capstone customer. At least 5 must be open. Run a 5-minute discovery practice with a partner — listen more than you talk."

[Cash gives a small nod. Fade.]

SCRIPT

# Video 4 — "The Honest Close" (Week 14, Unit 2 mid)

**GRADE 11 · 2:30–3:00 · CASH VOICE**

**Runtime target:** 2:50 **Strand mapping:** CBM + ESL **Word count target:** 375

**VISUAL** Cash holding two cards. One reads CLEVER. One reads HONEST.

**CASH:** I want to talk about the moment in a sales conversation where most people get something wrong. The close. The moment where you stop asking questions and you actually ask the customer to buy. There is a clever way to do this and there is an honest way to do this. They are not the same thing.

**VISUAL** The CLEVER card glints. The HONEST card stays plain.

**CASH:** The clever close is the one that uses pressure. "If you don't sign today, the price goes up tomorrow." "Three other people are looking at this right now." "What's stopping you?" These work. They work in the way that walking up close to someone and refusing to step back works. You'll get a yes sometimes. You won't get a long-term customer.

**VISUAL** A handshake fading. A "1-star review" appears in the corner.

**CASH:** The honest close is different. It sounds like this. "Based on what you said about your situation, here's what I'd recommend. Here's what it costs. Here's what it doesn't do. Would you like to start with the smallest version?"

**VISUAL** A clean speech bubble with each part highlighted in turn.

**CASH:** Notice three things. One: it references what they said. Their words, their situation. Two: it names the limits. Honest claim. The product doesn't do everything. Three: it offers a small first step. Not "sign the big version." Try the small version.

**VISUAL** Three small sticky notes appear: REFERENCE THEIR WORDS — NAME LIMITS — OFFER SMALL FIRST STEP.

**CASH:** Here's the thing nobody tells you in the movies. The honest close also gets a no sometimes. Sometimes the customer is right. The product isn't for them. When that happens, the move is to say so — and, if you can, point them to who it would be right for. They'll remember that. They'll come back. They'll tell other people.

**VISUAL** A "no" speech bubble. Cash nods. The customer waves and walks off — and then, later, sends three friends.

**CASH:** The grading rubric this year has a row called Honest Claim. A great-feeling sale that involves a misleading claim scores a 1 on that row no matter how smooth the rest of it was. That's not because I'm scolding you. That's because the cleverest claims build the shortest businesses. The customer who feels manipulated tells five people. The customer who feels heard tells three. Three honest customers compound. Five angry ones compound faster.

**CLASSROOM CTA**

**"This week: record a 5-step sales role-play. Self-score on Honest Claim and Clear Ask. Watch the recording. Find one moment you'd redo."**

[Cash gives a small nod. Fade.]

SCRIPT

# Video 5 — "Profit Is an Opinion. Cash Is a Fact." (Week 19, Unit 3 launch)

GRADE 11 · 2:30–3:00 · CASH VOICE

**Runtime target:** 3:00 **Strand mapping:** MFL + LRCI **Word count target:** 405

VISUAL Cash sitting at a slightly more grown-up desk than usual. A small whiteboard in the background.

CASH: **I want to tell you something that took me longer to learn than it should have. Here it is. Profit is an opinion. Cash is a fact.**

VISUAL Two cards appear. Left: PROFIT — OPINION. Right: CASH — FACT.

CASH: **Sounds weird, right? You'd think profit is the real number and cash is just the bank account. Let me show you why it's the other way around.**

VISUAL A small business storefront animation begins.

CASH: **Maya runs a tutoring service. In November she earns twelve hundred dollars — three students at four hundred each. She paid eight hundred in costs — printing, software, the peer tutor she pays a stipend to. On paper, she made four hundred dollars. Profitable.**

VISUAL A clean P&L: Revenue $1,200, Costs $800, Profit $400.

**CASH:** Now the truth. Two of those three students didn't pay until December. So in November, only four hundred came in. But she still had to pay all eight hundred in costs in November. End of November, her bank had less money than it started with. Negative four hundred in cash.

**VISUAL** A bank balance graph dips into red.

**CASH:** Profit said winning. Cash said losing.

**VISUAL** PROFIT card glowing green. CASH card flashing red.

**CASH:** This is the thing that kills small ventures. Not bad ideas. Not bad customers. Cash flow timing. The money goes out before it comes in, and one month you can't make payroll, or pay rent, or buy your supplies. Game over — even though the business was "profitable."

**VISUAL** An animation of a cliff with a tightrope across it labeled "CASH FLOW."

**CASH:** Here's what real founders do. They build a thing called a cash flow forecast. Twelve months. Each month they ask: what's the cash coming in this month? What's the cash going out? What's left at the end of the month? Then they look across the twelve months and they find the tight month — the month where ending cash gets uncomfortably low.

**VISUAL** A 12-month chart. One bar dips way lower than the rest, highlighted.

**CASH:** Once they know the tight month, they have a choice. Move expenses earlier or later. Move revenue forward by getting paid up front or with a deposit. Cut a cost. Add a small line of credit. Pick a fix.

**VISUAL** The dipping bar is now flanked by smaller arrows pointing left and right — "delay this," "speed this up."

**CASH:** The tight month doesn't go away if you don't look at it. It just hits you in person.

**CLASSROOM CTA**

**"This week: take your Capstone venture. Build a 12-month cash flow forecast. Even if half the numbers are guesses. Find your tight month. Propose two fixes. Bring them to the next checkpoint."**

[Cash gives a small nod. Fade.]

SCRIPT

# Video 6 — "The Tight Month" (Week 24, Unit 3 mid)

> **"An MVP is the smallest test that could change your mind. It's not a v1."**
>
> - CASH, GRADE 11

**GRADE 11 · 2:30–3:00 · CASH VOICE**

**Runtime target:** 2:50 **Strand mapping:** MFL **Word count target:** 360

**VISUAL** Cash at a desk with the 12-month forecast spreadsheet projected on the wall behind. One bar in the chart is highlighted.

**CASH:** Last time we talked about why cash matters more than profit. Today I want to go one layer deeper. The single most useful exercise in this unit. Sensitivity analysis on your tight month.

**VISUAL** The word SENSITIVITY appears, with three sub-arrows: PRICE — VOLUME — COST.

**CASH:** Here's the question. You found your tight month. The month where ending cash is lowest. Now what would happen to that month if your assumptions were a little wrong? What

**if your price was twenty percent lower? Your volume thirty percent lower? Your costs fifteen percent higher?**

VISUAL Three rows of numbers shifting. The tight-month bar moves up and down.

CASH: **Move one variable at a time. Watch the tight month change. Most students discover something surprising. For most ventures, volume changes hit harder than price changes. A ten percent price cut is painful. A thirty percent volume drop is catastrophic.**

VISUAL A bar chart. Volume drop dwarfs price drop.

CASH: **Now find your break point. Walk down the worst variable until ending cash crosses zero or runway falls below two months. That number — the number where the venture stops working — is the most useful number in your spreadsheet. Most adults running ventures don't know this number. You will.**

VISUAL A red line on the chart marking BREAK POINT.

CASH: **Knowing your break point changes how you think. If you know your venture breaks at thirty percent volume drop, you start asking: what would cause a thirty percent volume drop? Seasonality? A competitor? A school year ending? Now you can plan for it. You can pick experiments that test against it. You can write a no-go list that protects against it.**

VISUAL Three sticky notes appear: SEASONALITY — COMPETITOR — END OF SCHOOL YEAR.

CASH: **Here's the thing this exercise teaches you that nothing else does. Most ventures don't fail in their model. They fail when reality is twenty percent harder than the model assumed. The break-point exercise shows you how much harder reality can get before you're done.**

VISUAL The base case and downside case side by side. A small "20% harder" arrow.

CASH: **Here's the discipline. Run the sensitivity even when the base case looks good. Maybe especially then. A base case that looks good and breaks at minus ten percent volume is a fragile venture. A base case that looks tight but holds at minus thirty percent volume is a sturdy one. The number that matters isn't the rosy one. It's the breaking one.**

**VISUAL** Two charts side by side. Rosy / fragile vs. tight / sturdy.

**CASH:** A model that doesn't break is a model you don't trust yet. Push yours until it breaks.

**CLASSROOM CTA**

"This week: run sensitivity on your forecast. Walk down the worst variable until you find your break point. Write one sentence about what it means for your venture."

[Cash gives a small nod. Fade.]

SCRIPT

# Video 7 — "The 5-Experiment Backlog" (Week 30, Unit 4 launch)

**GRADE 11 · 2:30–3:00 · CASH VOICE**

**Runtime target:** 2:55 **Strand mapping:** PSIG + OSO **Word count target:** 390

**VISUAL** Cash standing in front of a backlog board labeled GROWTH BACKLOG with five empty rows.

**CASH:** Six weeks. Five experiments. That's the sprint. Let me explain why this shape, and not the other shapes.

**VISUAL** A "6" and a "5" appear on the board.

**CASH:** The instinct, when you're trying to grow something, is to pick one big bet. "We'll launch the big offer." "We'll go viral." "We'll get a famous person to tweet about us." That's what most teams want to do. It's also what kills most teams. One big bet is one big way to be wrong.

**VISUAL** A single big arrow labeled BIG BET. Then it crashes into a wall.

**CASH:** A backlog of five small experiments is different. Each one is a hypothesis you can falsify. Each one fits in a week. Each one has a metric. Each one has a stop rule.

**VISUAL** Five small arrows, each labeled with HYPOTHESIS — TEST — METRIC — STOP RULE.

**CASH:** Here's the hypothesis structure. If we change X, then Y will happen, because Z. That's a real hypothesis. "If we send twenty personal DMs to soccer parents this week, then we'll get three trial sign-ups by Friday, because soccer parents talk to each other on the sideline." That's testable. You'll know by Friday whether it worked.

**VISUAL** A neat If/Then/Because card appears.

**CASH:** Now contrast that with what most teams write. "We'll do more outreach." That's not a hypothesis. That's a to-do. There's no metric, no test, no stop rule. You can do it for six weeks and not know if it worked.

**VISUAL** A messy sticky note labeled "do more outreach" gets crumpled and tossed.

**CASH:** Pick a leading metric for each experiment. Leading means it predicts. Trial sign-ups predict paid customers. DM responses predict trial sign-ups. The lagging metric — paid customers, revenue — is the outcome you want. The leading metric is what you can move this week.

**VISUAL** A cascade. DM responses → trial sign-ups → paid customers.

**CASH:** And every experiment needs a stop rule. "If by Friday we've got fewer than two trial sign-ups, we stop and reassess." Without a stop rule, experiments run forever and you never get to the next one.

**VISUAL** A timer with a red STOP button.

**CASH:** One last thing. Sequence the backlog by what you'd learn. Run the experiment first that, win or lose, teaches you the most. Not the safest experiment. Not the easiest experiment. The most informative one. The cheapest no is more valuable than the slowest yes.

**CLASSROOM CTA**

**"This week: with your team, draft five experiments using the If/Then/Because structure. Pick a leading metric for each. Write a stop rule. Sequence them by learning. Demo the backlog Friday."**

[Cash gives a small nod. Fade.]

SCRIPT

# Video 8 — "What We Learned: Pitch Day" (Week 36, Unit 4 close)

GRADE 11 · 2:30–3:00 · CASH VOICE

**Runtime target:** 3:00 **Strand mapping:** LRCI + BAVC **Word count target:** 410

VISUAL Cash standing in front of a six-slide deck. One slide is visibly more important than the others — labeled "WHAT WE LEARNED."

CASH: **You're about to pitch. Five minutes. A real panel. Real adults asking real questions. Before you go in, let me tell you the thing nobody told me when I was pitching for the first time.**

VISUAL A small character standing on a stage, deep breath. Five-minute timer in corner.

CASH: **The most important slide in your deck is not the customer slide. It's not the solution slide. It's not the ask. It's the slide labeled "What We Learned." That's the one the panel cares about most. And it's the one most teams under-build.**

VISUAL The deck zooms past five slides and lingers on slide five.

CASH: **Here's why. The panel has heard a lot of pitches. They know what a good customer slide looks like. They know what a hype slide sounds like. The thing they don't know — and the only thing that tells them whether your team can actually run a venture — is what you**

**found out by trying. The experiments that didn't work. The customers who said no. The pricing assumption you had to revise. The thing you thought would matter that didn't.**

VISUAL A list of "didn't work" sticky notes pinned to a board.

CASH: **The teams who say "we crushed it" are asking the panel to take their word. The teams who say "here are three things that didn't work and what we'd do next" are showing the panel they've been doing the work. Pick the second one. Every time.**

VISUAL Two pitch teams side by side. One has a flag that says "WE CRUSHED IT." Other has a chart labeled "3 EXPERIMENTS, 1 PIVOT, 1 INSIGHT."

CASH: **Now the Q&A. The panel is going to ask hard questions. Some of them you won't know the answer to. The move is not to fake it. The move is to say "I don't know that yet — and here's how I'd find out." That answer scores higher than a confident-sounding wrong answer almost every time.**

VISUAL Speech bubble: "I don't know yet. Here's how I'd find out." A green check appears.

CASH: **One more thing. After the pitch, write down the strongest panel question you got. Quote it exactly. Then write the honest answer you would have given if you'd had it to do over. That paragraph — the revision — is part of your grade. It's part of your year. It's the first paragraph of Grade 12.**

VISUAL A new notebook page labeled "REVISION."

CASH: **You did the work. You led three people for four weeks. You recorded yourself selling. You found your tight month. You ran five experiments. The panel is going to see all of it in five minutes. Tell them the truth. Especially the parts that didn't work.**

CLASSROOM CTA

**"This week: deliver your pitch. After Q&A, write down the strongest question you got and your honest revision answer. That's the artifact that closes the year and opens Grade 12."**

[Cash gives a small nod. Fade to title card: SEE YOU IN GRADE 12.]

# UPGRADE LAYER (added by Brand & SMM Director, 2026-04-25)

**Note:** Grade 11 is the high-school anchor and is already strong. Upgrades focus on Shorts cuts, LinkedIn-shareable carousel framing, and explicit 60-second school-TikTok cut suggestions.

AN INTERLUDE · GRADE 11

# "Most adults skip this step. You won't."

the band's working assumption.

2

SCRIPT

## Video 1 — "Leadership Without Authority" — Upgrade

- **Shareable Cash line:** "Leadership at sixteen is mostly clarity."
- **9-second Shorts cut:** Three index cards reveal: WHAT'S TRUE / WHAT'S NEXT / WHO OWNS IT. **TOP-3 LINKEDIN-CAROUSEL CANDIDATE.**
- **60-sec cut:** Charter + 1:1 + Retro framework, suitable for school account post.
- **Classroom CTA already strong.**

SCRIPT

## Video 2 — "The First 1:1 (And Why Most Adults Get It Wrong)" — Upgrade

- **Shareable Cash line:** "The point of a 1:1 is for the listener to learn something they didn't know."
- **9-second Shorts cut:** Status-dump version vs. real-1:1 version.
- **60-sec cut:** the four prompts — Wins / Stuck / Question / Need.

ENDNOTES & STANDARDS

# Citations and alignment

**Grade 11 cites 3-6 standards across CCSS, Jump$tart, CEE, CASEL, and C3 frameworks. Detailed alignment lives in the master Standards Alignment Map.**

1. **Jump$tart Coalition Personal Finance Standards (2021 ed.).** Spending and Saving; Credit and Debt; Employment and Income; Investing; Risk Management and Insurance; Financial Decision Making.
2. **Council for Economic Education (CEE).** Voluntary National Content Standards in Economics.
3. **CCSS-ELA, Grades 11-12.** W.11-12.1, W.11-12.4, SL.11-12.1, SL.11-12.4, RST.11-12.7.
4. **CCSS-Math.** N-Q.1-3 (Reasoning with Quantities), S-IC (Statistics & Inferences), F-IF (Functions), MP.4 (Modeling).
5. **CASEL Core Competencies.** Self-Awareness, Self-Management, Social Awareness, Relationship Skills, Responsible Decision-Making.
6. **C3 Framework for Social Studies State Standards.** Dimension 2 (Economics, Civics) at the high-school grade band.
7. **NGSS-ETS Engineering Practices.** ETS1 (Engineering Design) for the test-and-iterate spine of the year.
8. **Cash to Company Master Scope & Sequence.** 13 grades x 8 strands x 36 weeks; outcomes quoted verbatim from _master/00_Master_Scope_and_Sequence.md.
9. **Cash Mascot Style Guide.** 9-12 voice rules: multi-sentence arguments; vocabulary includes unit economics, runway, premortem, MVP; never flatters, never promises wealth.
10. **Sensitivity protocol.** No probing of family finances; financial scenarios framed as hypothetical for a sample household, business, or scenario.

# One promise.

Cash to Company makes one promise: students who move t
program will be clearer thinkers about money and entrepren
matter what they end up doing for a living.

We do not promise wealth. We do not promise success. We pro

> **“Leading three people, listening to one customer, executing six weeks.”**
