CONTENTS

Inside this volume

Grade 11 · Lesson Plans · the magazine version of the master document, set for adults to read end-to-end.

01 Lesson 1 — Day 1 Leadership Stance

02 Lesson 2 — The Team Charter and the First 1:1

03 Lesson 3 — Running a Useful Retrospective

04 Lesson 4 — Discovery Questions That Get Real Answers

05 Lesson 5 — The 5-Step Sales Conversation and the Honest Close

06 Lesson 6 — Objection Handling: Three Hard Calls

07 Lesson 7 — Cash Flow Forecast: The Month Where Money Gets Tight

08 Lesson 8 — Sensitivity Analysis: When the Plan Breaks

09 Lesson 9 — Building the 5-Experiment Growth Backlog

10 Lesson 10 — Investor-Style Pitch: Defense Day Itself

11 Cross-lesson notes

12 Senior expert upgrade pack — Grade 11 misconceptions

13 ROUND 2 PATCH — Common Misconceptions (Grade 11)

14 ROUND 2 PATCH — Worked Examples for Cash Flow Forecast Lesson

15 ROUND 2 PATCH — Multi-Class Branching Scenario (Grade 11)

16 ROUND 2 PATCH — Hiring Basics Lesson (Grade 11, NEW)

17 ROUND 2 PATCH — Teacher Move Set (Grade 11)

GRADE 11 · LESSON PLANS

Ten Anchor Lesso

Leading three people, listening to one customer, executing six weeks.

11

Ten fully fleshed lessons spanning the year. Each lesson is built to pass the picks-up-Monday test: a teacher with no prior prep should be able to read this Sunday night and teach it Monday morning. Standards are cited at the benchmark level. Differentiation notes are specific and actionable. Vocabulary is included for each lesson. Default time blocks are 60 minutes (high-school period); blocks of 90 minutes are flagged.

WITH CASH - 9-12 VOICE

"Some of this is hard because the world's hard. The skill is knowing what's in your hands."

Lessons are sampled across the year so the full arc is visible:

1. (Week 1) Cash V1 launch + Day 1 Leadership Stance
2. (Week 4) The Team Charter and the First 1:1
3. (Week 7) Running a Useful Retrospective
4. (Week 10) Cash V3 + Discovery Questions That Get Real Answers
5. (Week 14) The 5-Step Sales Conversation and the Honest Close
6. (Week 17) Objection Handling — Three Hard Calls
7. (Week 22) Cash Flow Forecast: The Month Where Money Gets Tight (90 min block)
8. (Week 26) Sensitivity Analysis — When the Plan Breaks
9. (Week 30) Cash V7 + Building the 5-Experiment Growth Backlog
10. (Week 36) Investor-Style Pitch — Defense Day Itself (90 min block)

Lesson 1 — Day 1 Leadership Stance

> **"You can pick what kind of business you build. It's a choice."**
>
> - CASH, GRADE 11

Grade band: 9-12 **Time:** 60 minutes **Unit:** 1 — Leading without authority **Topic area:** Course launch · leadership self-assessment

Objectives

By the end of this lesson, students will be able to:

- Write a "Day 1 Leadership Stance" naming the kind of teammate they aim to be in three concrete behaviors.
- Distinguish between leadership-as-charisma and leadership-as-clarity using one example each.

Standards alignment

- **CCSS-ELA W.11-12.4:** Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience.
- **CASEL Self-Awareness + Relationship Skills:** Identifying personal strengths and recognizing how leadership behavior affects others.
- **Jump$tart Standard 3 (Employment and Income), Benchmark 12-2:** Explore career paths of interest — including entrepreneurship as a path. (Applied to leadership self-concept.)

Materials

- Cash Video #1 ("Leadership without authority") — 2:45 (or printed transcript).
- One Capstone Journal per student.
- Two index cards per student.
- A 2-foot strip of butcher paper labeled "Charisma" on one end and "Clarity" on the other, taped to wall.
- A list of 8 leader behaviors printed on cards: e.g., "Names the next 3 things to ship," "Tells the room they're great," "Asks 'what's blocking you?' in a 1:1," "Posts a long inspirational message," "Sends a 1-line update Friday," "Pulls a quiet teammate aside to ask their view," "Promises a big win at the kickoff," "Cuts a goal in half because the team is overloaded."

Vocabulary

- **Leadership** — at this age, the act of helping a small group of people make and keep agreements about who does what by when.
- **Charisma** — the warm-presence dimension of leadership; useful but insufficient.
- **Clarity** — the ability to name what's true, name what's next, and name who owns it.

Procedure

1. Engage — Cash Video + Pair-Share (~7 min). Play Cash Video #1. Then post: "Think of one person — adult or peer — who led something well. What's the most specific thing they actually did? Not 'they were inspiring.' What did they do?" Pair-share for 3 minutes; cold-call two students.

2. Explore — Charisma vs. Clarity Continuum (~12 min). Distribute the 8 behavior cards. Read each aloud; students walk to the spot on the line that matches. After each, ask one student why they picked that spot. Don't correct — let students hear each other. The goal: surface the difference between leader-as-vibe and leader-as-operator.

3. Explain — The Year's Frame (~10 min). Define the three vocabulary words. State the year's leadership norm: "In this room, leadership is not who talks the loudest. It is who can name the next 3 things to ship and who owns each one." Walk through the year-at-a-glance: students will lead a 3-person team for 4 weeks (Unit 1), run sales conversations (Unit 2), forecast cash (Unit 3), and run a 6-week sprint (Unit 4). The Capstone team you join in Week 3 you keep all year.

4. Apply — Day 1 Leadership Stance (~20 min). In the Capstone Journal, students write three concrete behaviors:

> "As a teammate this year, I will be the person who..." 1. _____ (a behavior, not an adjective) 2. _____ 3. _____

Confer with 6 students. Read their three; flag adjectives ("supportive," "kind") and push toward behaviors ("checks in with the quietest teammate by Wednesday," "posts a 3-bullet status every Friday before 3pm").

5. Close — Pin and Predict (~7 min). Each student writes the three behaviors on an index card with their name. Collect; you'll hand them back at the Week 8 retrospective so students can see what held and what didn't. On the back of the card, students predict on a 1–5 scale: "How likely am I to actually do these three things, four weeks from now?"

Differentiation

- **ELL.** Provide sentence frames for the three behaviors. Allow native-language drafting with English finalization. Pre-teach charisma and clarity with cognates if applicable.
- **IEP/504.** Provide a printed list of 12 example behaviors students can adapt instead of generating from scratch. Allow voice-recorded version.
- **Advanced learners.** Add a fourth behavior: "What I will refuse to do, even if it would make me look good?" This sets up the ethics unit and the no-go list.

Assessment

Formative: Watch the continuum activity. Confer notes during writing. **Summative:** The Day 1 Leadership Stance card is filed; will be revisited in the Unit 1 retrospective.

Closure

Same as #5.

Teacher notes

- The continuum is the engine. Don't skip the movement piece — kinesthetic + visible thinking.
- Some students will write "be a good leader" three times. Coach: what would I see you doing? When? With whom?
- A student says "I'm not a leader." Reframe: at 16, leadership is the ability to keep three agreements with three people for four weeks. That's a learnable skill, not a personality.

Lesson 2 — The Team Charter and the First 1:1

Grade band: 9-12 **Time:** 60 minutes **Unit:** 1 — Leading without authority **Topic area:** Team formation · charter · 1:1 practice

Objectives

- Draft a 1-page team charter for a 3-person Capstone team that includes purpose, roles, decision rules, and conflict protocol.
- Conduct a 10-minute structured 1:1 with one teammate using a 4-prompt framework.

Standards alignment

- **CCSS-ELA W.11-12.4:** Produce clear and coherent writing.
- **CCSS-ELA SL.11-12.1:** Initiate and participate effectively in a range of collaborative discussions.
- **CASEL Relationship Skills:** Communication, leadership, conflict management.
- **Jump$tart Standard 6 (Financial Decision Making), Benchmark 12-4:** Apply systematic decision-making to long-term goals. (Applied to team-formation choices.)

Materials

- Team charter template (provided in Activity Book).
- 1:1 prompt card: Wins this week / Stuck on / Question for me / What you need.
- Capstone Journal.

Vocabulary

- **Charter** — a 1-page agreement among teammates about how they will work together.

- **1:1** — a regularly scheduled one-on-one conversation between teammates (here, peer-to-peer).
- **Decision rule** — an agreed-upon process for resolving disagreements.
- **RACI** — Responsible, Accountable, Consulted, Informed — a way to clarify ownership.

Procedure

1. Engage — Two team stories (~7 min). Tell a 3-minute story about two student teams from last year. Team A spent the first week planning who does what and how decisions get made. Team B jumped into the work. Six weeks later, Team A had shipped a working venture. Team B had four crossed-out plans and one fight. The difference wasn't the people. It was the charter.

2. Charter mini-lesson (~10 min). Walk through the 5 charter sections: - **Purpose.** What we're building, in one sentence. - **Roles.** Who is accountable for what (RACI lite). - **Norms.** How we communicate, when we meet, how we handle disagreement. - **Decision rules.** Who decides, how. Default: consensus on big calls, leader-decides on small ones, with a fallback escalation. - **What I'm bringing.** Each teammate names what they're committing.

3. Draft the charter (~25 min). Teams of 3 work together. Each section gets 5–7 minutes. Confer: walk and listen for vague or aspirational language ("we'll all be respectful"). Push toward specifics: what does "respectful" mean concretely when somebody misses a deadline?

4. Run the first 1:1 (~12 min). Each teammate pairs with one other. Use the 4-prompt card: - Wins this week. - What I'm stuck on. - A question for you. - What I need from you next week.

5 minutes per direction; 10 total. Coach: this is listening practice, not "report on your work." The 1:1 fails if both people just dump status.

5. Close — Capstone Journal entry (~6 min). - One thing the charter didn't address that I'm worried about. - One thing I learned in the 1:1 about my teammate.

Differentiation

- **ELL.** Provide the charter template with each section pre-explained. Allow native-language brainstorming with English finalization. Pair on the 1:1 with an ally.
- **IEP/504.** Allow recorded 1:1s for review later. Provide a printed prompt card. Extended time on the charter.
- **Advanced learners.** Add a "what would a great teammate look like to you?" section. Push toward an explicit escalation path for disagreements that don't resolve at the team level.

Assessment

Formative: Walk during charter drafting; listen during 1:1s. **Summative:** Charter is filed; 1:1 logs become part of the Unit 1 anchor artifact.

Teacher notes

- The charter is unsexy and load-bearing. Teams that skip it return to fix it in Week 4 — or fail. Protect the time.
- A team disagrees on decision rules. Coach: that disagreement is the gift of the charter — better to surface it now than at Week 6.
- A student says "I'll just be the leader." Probe: are you accountable for everything, or only what you said you'd do? RACI cuts the difference.

Lesson 3 — Running a Useful Retrospective

Grade band: 9-12 **Time:** 60 minutes **Unit:** 1 — Leading without authority **Topic area:** Retrospective · feedback · revision

Objectives

- Run a 4-step retrospective on a 4-week sprint using the "Continue / Stop / Start / Decide" frame.
- Write 1 specific commitment for the next sprint and identify the dependency that could derail it.

Standards alignment

- **CCSS-ELA SL.11-12.1.D:** Respond thoughtfully to diverse perspectives; synthesize comments and ideas.
- **CCSS-ELA W.11-12.5:** Develop and strengthen writing as needed by planning, revising, editing.
- **CASEL Relationship Skills:** Conflict management.
- **NGSS-ETS HS-ETS1-3:** Evaluate a solution to a complex real-world problem based on prioritized criteria and trade-offs.

Materials

- Retrospective template (provided): 4 columns labeled Continue / Stop / Start / Decide.
- Sticky notes (4 colors).
- Capstone Journal.

Vocabulary

- **Retrospective** — a structured conversation at the end of a work cycle to name what worked, what didn't, and what changes next.
- **Dependency** — something outside your control that your work needs to succeed.
- **Commitment** — a specific behavior you'll do, with a date.

Procedure

1. Engage — The blame-free frame (~5 min). Read aloud: "A useful retrospective is not 'who screwed up?' It is 'what was the system that made the screw-up easy?'" Cash voice: "If you did the wrong thing in a system that made the wrong thing easy, fix the system."

2. Solo brainstorm (~10 min). Each teammate, silent, on sticky notes: - Green: 2 things to **Continue** (this worked). - Red: 2 things to **Stop** (this didn't). - Yellow: 2 things to **Start** (this could). - Blue: 1 thing the team needs to **Decide** (we've been avoiding it).

3. Cluster and read (~15 min). Teammates post their stickies on the template. Read each cluster aloud. No defending — just reading. Theme the clusters in 2–3 words.

4. Discuss the Decide column (~15 min). This is the high-leverage block. The team picks one Decide item and resolves it. Coach: a real decide ends with "so we will do X by Y." Not "we'll think about it."

5. Commit + dependency (~10 min). Each teammate writes in the Capstone Journal: - My one specific commitment for the next sprint: (behavior + date) - The dependency that could derail this: (what or who outside my control) - My fallback plan if the dependency fails: (one sentence)

6. Close — Stand-up share (~5 min). Teams stand. Each member reads their commitment aloud. Teammates can ask one clarifying question. End class.

Differentiation

- **ELL.** Provide phrase banks for each column (e.g., "What worked: ___ helped because ___"). Allow voice-noted stickies if writing is slow.
- **IEP/504.** Reduce sticky count from 7 to 4. Provide pre-filled examples for each column.
- **Advanced learners.** Lead the team's Decide-column conversation as facilitator. Practice the "so we will do X by Y" close-out.

Assessment

Formative: Walk during cluster reading; coach Decide conversations. **Summative:** Commitment + dependency entries are part of the Unit 1 anchor artifact.

Teacher notes

- Some teams will go silent on the Decide column. The thing they're avoiding is the thing that needs deciding. Sit with the silence; ask "what's the one thing nobody's saying?"
- A team blames one teammate. Reframe: "What was the system?" Then: "What's the one change to the system that would have helped?"
- The retrospective is a practiced skill. The Week 8 retro will be rough; the Week 36 retro will be where the year's leadership growth is most visible.

Lesson 4 — Discovery Questions That Get Real Answers

Grade band: 9-12 **Time:** 60 minutes **Unit:** 2 — Sales is structured listening **Topic area:** Sales discovery · open questions

Objectives

- Distinguish between discovery, qualifying, and closing questions in a sales conversation.
- Write 7 discovery questions tailored to the student's Capstone customer, with at least 5 in open-question form.

Standards alignment

- **CCSS-ELA SL.11-12.1:** Initiate and participate in collaborative discussions.
- **CCSS-ELA SL.11-12.3:** Evaluate a speaker's point of view, reasoning, and use of evidence.
- **CEE Standard 2 (Buying Goods and Services), Grade 12:** People can use information from sellers and outside reviewers to compare products. (Flipped: students learn to be honest sellers.)
- **CASEL Social Awareness.**

Materials

- Cash Video #3 ("Discovery Is More Than Half") — 2:50.
- Discovery question bank (provided): 25 stem questions.
- Capstone Journal.

Vocabulary

- **Discovery** — the part of a sales conversation where the seller is mostly listening, asking open questions about the customer's situation, pain, and goal.

- **Qualifying** — quickly checking whether this customer is the right fit (budget, decision authority, timing, need).
- **Open question** — a question that lets the answerer say what they actually think; usually starts with what, how, why, tell me about.

Procedure

1. Engage — Cash Video + Reflect (~7 min). Play Cash Video #3. Post: "What's the ratio of listening to talking in a great sales call? Cash says it's at least 60/40 in favor of the customer. When was the last time you had a conversation that ratio? What did the listener do?" Pair-share.

2. Explain — The discovery stack (~12 min). Walk through 4 layers of discovery: - **Situation.** What's their context? "Walk me through how you currently handle X." - **Pain.** Where does it cost them — time, money, frustration? "What's the most annoying part?" - **Goal.** What would "fixed" look like? "If you woke up Monday and this was solved, what's different?" - **Constraints.** What can't change? "What can't move on this — budget, timeline, who else has a say?"

3. Apply — Build your discovery script (~25 min). Students take their Capstone customer (locked from Grade 10 + Week 8 persona refresh) and write 7 discovery questions, at least one per layer. Confer: read 5 students' scripts. Flag leading questions ("you'd want a faster service, right?") and rewrite.

4. Pair practice (~12 min). In pairs, run a 5-minute discovery (no presenting yet — just discovery). The "customer" is asked to be a real version of their own life (not the student's Capstone target). After 5 minutes, switch.

5. Close — Reflection (~4 min). Capstone Journal: - One question I asked that got a real answer. - One question I asked that got a non-answer. What might I rewrite it to?

Differentiation

- **ELL.** Provide all 7 question stems as starters. Allow first practice in native language with English summary. Pair with an ally.
- **IEP/504.** Permit reading questions from the page in pair practice. Build to extemporaneous in later rounds.
- **Advanced learners.** Add a "5 Whys" follow-up for one answer. Practice the pivot from discovery into present without pre-announcing it.

Assessment

Formative: Walk and listen during pair practice. **Summative:** Discovery script is filed; will be used in the Week 14 recorded role-play.

Teacher notes

- Most students underdo discovery and overdo presenting. This lesson is the corrective. If they can listen for 5 minutes without pitching, they're ahead of most adult salespeople.
- A student says "this feels like an interview, not a sale." Validate: yes — and the best sales feel like that to the customer too.

Lesson 5 — The 5-Step Sales Conversation and the Honest Close

> **“Some of this is hard because the world's hard. The skill is knowing what's in your hands.”**
>
> - CASH, GRADE 11

Grade band: 9-12 **Time:** 60 minutes **Unit:** 2 — Sales is structured listening **Topic area:** Sales structure · ethics of selling · self-scoring

Objectives

- Apply a 5-step sales conversation structure (Open · Discover · Present · Handle objection · Close) in a 10-minute role-play.
- Self-score a recorded role-play using a 6-criterion sales rubric.

Standards alignment

- **CCSS-ELA SL.11-12.1:** Initiate and participate in collaborative discussions.
- **CCSS-ELA SL.11-12.4:** Present information, findings, and supporting evidence clearly, concisely, and logically.
- **Jump$tart Standard 6 (Financial Decision Making), Benchmark 12-1:** Apply reliable information and systematic decision making.
- **CEE Standard 2 (Buying Goods and Services), Grade 12:** People can use information from sellers and outside reviewers to compare products.
- **CASEL Social Awareness + Relationship Skills.**

Materials

- Sales rubric (6 criteria: Rapport · Discovery · Value-fit · Objection-handling · Honest claim · Clear ask).

- Phones or tablets for recording.
- Two role-play scripts: easy customer, harder customer with an early objection.
- Capstone Journal.

Vocabulary

- **Open.** Build rapport; set expectations; signal you're going to listen.
- **Present.** Show the product or service in terms of their situation, not yours.
- **Handle objection.** Treat the "no, but" as information, not rejection.
- **Close.** Make a clear ask. Not "what do you think?" but "would you like to start with the smallest version?"
- **Honest claim.** A statement you would defend under cross-examination, with a number or example.

Procedure

1. Engage — Bad sales call audio (~7 min). Play (or read aloud) a 2-minute exaggerated bad sales call — all pitch, no listening, manipulative urgency. Stop. Ask: "What did this person do? What did they not do? Would you buy?"

2. The 5-step structure (~10 min). Walk through Open · Discover · Present · Handle Objection · Close. The key moves: - Discovery is more than half the conversation. Most beginners flip this. - Present in the customer's words, not yours. ("You mentioned you struggle with X — here's how this addresses X.") - Objections are gold. They tell you what's actually in the customer's head. - The close is a clear ask. Not vague.

3. Role-play round 1 (~15 min). Pairs rotate. Student A is seller, Student B is customer (easy script). 5 minutes. Switch.

4. Recording + self-scoring (~15 min). Each student does a second role-play, recorded, with the harder customer script. Self-score against the rubric. Note: criterion 5, "Honest claim," is non-negotiable. A great sale that involves a misleading claim scores 1 on that row no matter how smooth.

5. Close — Reflection (~13 min). Capstone Journal: - What I did well. - What I want to work on. - One question I wish I'd asked.

Differentiation

- **ELL.** Provide both scripts pre-translated. Allow first role-play in native language with English summary; require English on the recorded one. Pair with an ally.
- **IEP/504.** Permit reading from a script for the first attempt; build to extemporaneous in later rounds. Audio-only recording allowed.

- **Advanced learners.** Add a scenario where the "customer" has a fundamental misunderstanding about the product. The seller has to correct without losing the relationship.

Assessment

Formative: Walk and listen during role-plays. **Summative:** Recorded role-play + self-score is the Unit 2 anchor artifact, scored by teacher and peer.

Teacher notes

- Most students underdo discovery and overdo presenting. Coach: "What's the customer's actual situation? Did you ask?"
- The "honest claim" criterion is the year's ethics anchor. A student who lies their way to a yes scores low. Make this explicit and non-negotiable up front.
- Peer scoring is high-leverage. Pair students to score each other's recordings; the calibration discussion afterward teaches as much as the role-play.

AN INTERLUDE · GRADE 11

"Which people, and how do you know?"

the program's spine question.

1

Lesson 6 — Objection Handling: Three Hard Calls

Grade band: 9-12 **Time:** 60 minutes **Unit:** 2 — Sales is structured listening **Topic area:** Sales objections · ethical refusal · pricing math

Objectives

- Apply a 3-step objection-handling frame (Acknowledge · Clarify · Respond) to three common objections.
- Identify one objection where the right answer is "this isn't the right fit" rather than "let me convince you."

Standards alignment

- **CCSS-ELA SL.11-12.3:** Evaluate a speaker's point of view, reasoning, and use of evidence.
- **CCSS-ELA SL.11-12.4:** Present information, findings, and supporting evidence.
- **CASEL Responsible Decision-Making.**
- **Jump$tart Standard 6 (Financial Decision Making), Benchmark 12-4:** Apply systematic decision-making to long-term goals.

Materials

- Three common-objection cards: "Too expensive," "I need to think about it," "I don't think this is for me."
- Objection-handling frame on the wall: Acknowledge · Clarify · Respond.
- Capstone Journal.

Vocabulary

- **Acknowledge** — name the objection back to the customer in their words. "Got it — the price feels high right now."
- **Clarify** — ask what's underneath. "What number would feel right? What's it being compared to?"
- **Respond** — answer with evidence (a number, an example, a tradeoff) or, sometimes, agree the fit isn't right.
- **No-fit** — the honest answer when the customer is right that this isn't for them.

Procedure

1. Engage — A real objection, real answer (~7 min). Read aloud a real-world scenario: a teen tutoring service charging $40/hour gets the response "that's expensive." Walk through three

responses: (a) defensive ("but it's worth it!"), (b) collapsing ("okay, $25?"), (c) using the frame. Show why (c) is stronger.

2. The frame mini-lesson (~10 min). Acknowledge · Clarify · Respond. The discipline: - Acknowledge first. Always. Even when you disagree. - Clarify before responding. Most objections hide a different real concern. - Respond with evidence, not assertion. - Sometimes the response is "you're right, this isn't a fit — here's who I'd send you to."

3. Three objections, three rounds (~25 min). In trios (one seller, one customer, one observer), run three 5-minute rounds, each with a different objection card. Observer fills out a quick rubric: did the seller acknowledge first? did they clarify? what was the response?

4. The no-fit conversation (~12 min). The hardest objection: when the customer is right. Run one round where the "customer" describes a real need that the Capstone product wouldn't actually solve. The "seller" has to recognize and decline. Debrief: what did it cost the seller to say no? what did it earn them?

5. Close — Capstone Journal (~6 min). - Which objection felt hardest? Why? - Write a 2-sentence script for it using Acknowledge · Clarify · Respond. - Name one no-fit scenario for your venture — a customer you would refuse.

Differentiation

- **ELL.** Provide phrase banks for each step (Acknowledge: "I hear that...", "Got it — you're saying..."). Allow first round in native language.
- **IEP/504.** Reduce to two objections. Allow scripted responses for the first attempt.
- **Advanced learners.** Add a fourth objection: a misleading claim from the customer that the seller has to honestly counter without losing rapport.

Assessment

Formative: Observer rubrics from the trio rounds. **Summative:** No-fit scenario is part of the ESL no-go list (Unit 2 → Unit 4 carry-forward).

Teacher notes

- Most students collapse on price. Coach: what does the math say the price needs to be? Defend it with one sentence.
- The no-fit conversation is the year's most under-practiced skill. Make space for it; most adults can't do it either.

Lesson 7 — Cash Flow Forecast: The Month Where Money Gets Tight

Grade band: 9-12 **Time:** 90 minutes (block) **Unit:** 3 — The cash flow truth **Topic area:** 12-month cash flow · runway · tight month

Objectives

- Build a 12-month cash flow forecast (cash in, cash out, ending cash) for a sample venture in a spreadsheet.
- Identify the month where ending cash is lowest and propose 2 specific fixes.

Standards alignment

- **CCSS-Math A-CED.A.2:** Create equations in two or more variables.
- **CCSS-Math F-LE.A.1:** Distinguish between situations that can be modeled with linear functions and exponential functions.
- **Jump$tart Standard 1 (Spending and Saving), Benchmark 12-2:** Develop a system for keeping and using financial records.
- **CEE Standard 1 (Earning Income), Grade 12:** Income from self-employment is not the same as profit.

Materials

- Spreadsheet template (provided): 12 monthly columns × rows for revenue line items, COGS, operating expenses, owner draw, ending cash.
- Sample venture description: a teen tutoring service that has growing demand but seasonal dips and an upfront investment in a website.
- Calculator.

Vocabulary

- **Cash flow** — the actual movement of cash in and out, as opposed to revenue/profit accruals.
- **Runway** — how many months of cash you have at the current burn rate.
- **Working capital** — the cash you need on hand to operate normally between paying expenses and receiving revenue.
- **Sensitivity** — how much the ending cash changes if one input changes (price, volume, cost).
- **Tight month** — the month where ending cash is lowest; the month most likely to kill the business.

Procedure

1. Engage — Profitable but broke (~10 min). Project the case: "Maya's tutoring service is profitable on paper. She earned $1,200 last month and her costs were $800. But her bank account is at $50 because three students paid her late and she had to buy materials up front. What's going on?" Pair-share. Surface: profit is an opinion (when revenue is recognized). Cash is a fact (when money actually moves).

2. Explain — The forecast structure (~15 min). Walk through the spreadsheet template: - **Beginning cash** (carries from prior month). - **Cash in** (revenue received this month — note this can lag billings). - **Cash out** (expenses paid this month). - **Ending cash** (Beginning + In – Out).

The key principle: ending cash for one month is the beginning cash for the next. A tight month makes the next month tighter.

3. We do — Sample forecast (~25 min). Together, build out the 12-month forecast for the sample tutoring venture. Surface key choices: - A $300 website investment in Month 1 — does it pay back? - Summer dip in demand (assume 30% of school-year volume in July/August). - Stipend offered to a peer tutor at $5/session — when does that pay off?

The class will reach a point where one specific month's ending cash is uncomfortably low (often August or September). Surface: this is your tight month. Most ventures that fail, fail there.

4. You do — Apply to Capstone (~30 min). Students take their own Capstone venture and build a 12-month cash flow forecast. Confer with as many as possible. Common stuck points: - "I don't know what my revenue will be." Coach: take a midpoint estimate; later we'll do sensitivity. - "I have no fixed costs." Probe: domain? subscription? phone bill? supplies bought in bulk?

5. Identify the tight month + propose fixes (~10 min). Students circle the tight month. In the Capstone Journal: - My tight month is ___. - Why is it tight? (1–2 sentences.) - Fix #1: (specific change to the venture or its timing.) - Fix #2: (specific.)

Differentiation

- **ELL.** Provide a glossary in the spreadsheet. Pair-work the first build; independent for the second.
- **IEP/504.** Reduce timeline from 12 months to 6 months for the independent forecast. Allow paper version with calculator if spreadsheet is overwhelming.
- **Advanced learners.** Build two forecasts — base case and downside case (revenue 30% lower). Identify how runway changes in the downside.

Assessment

Formative: Walk during forecast build. **Summative:** The 12-month forecast + tight-month analysis is the Unit 3 anchor artifact.

Teacher notes

- Some students compute negative ending cash and panic. Validate: this is what most early ventures look like at month 4 or 5. Coach toward "what would have to be true to fix it?"
- A student says "I'll just put more in if it gets tight." Probe: from where? Loan? Credit card? Family? Each option has tradeoffs. Pull in the Grade 10 funding-source comparison.
- The tight-month exercise is the year's most important financial moment. Don't rush it.

Lesson 8 — Sensitivity Analysis: When the Plan Breaks

Grade band: 9-12 **Time:** 60 minutes **Unit:** 3 — The cash flow truth **Topic area:** Sensitivity · scenario planning · break point

Objectives

- Run a 1-variable sensitivity analysis on the Capstone forecast (price ±20%, volume ±30%, cost ±15%).
- Identify the "break point" — the variable change that makes the venture insolvent — and write a 1-sentence implication.

Standards alignment

- **CCSS-Math A-REI.D.10:** Understand that the graph of an equation in two variables is the set of all its solutions plotted in the coordinate plane.
- **CCSS-Math F-LE.A.1:** Distinguish between situations that can be modeled with linear functions and with exponential functions.
- **NGSS-ETS HS-ETS1-3:** Evaluate a solution to a complex real-world problem based on prioritized criteria and trade-offs.
- **Jump$tart Standard 6, Benchmark 12-4:** Apply systematic decision-making to long-term goals.

Materials

- The Capstone forecast spreadsheet from Lesson 7.
- A printed sensitivity table template (3 rows: price, volume, cost; 3 columns: −, base, +).
- Capstone Journal.

Vocabulary

- **Sensitivity analysis** — testing how the outcome (ending cash, profit, runway) changes when one input moves.
- **Break point** — the input value at which the venture's ending cash drops below zero or its runway falls below a threshold (e.g., 2 months).
- **Scenario** — a coherent combination of input changes representing a plausible future.

Procedure

1. Engage — One variable at a time (~7 min). Walk through a small example: if price drops 20%, what happens to ending cash in Month 6? Project before and after. Show how a single change cascades.

2. Explain — The sensitivity table (~10 min). Three variables: price, volume, cost. Three values each: minus, base, plus. The discipline: change one variable at a time. (Two-variable scenarios come later.)

3. Apply — Run your sensitivity (~25 min). Each student modifies their forecast for each of the three variables and records the new ending cash for the tight month. Confer: most students will be surprised that volume changes hit harder than price changes (when contribution margin is moderate).

4. Identify the break point (~12 min). Each student walks their forecast down the most painful variable until ending cash crosses zero or runway falls under 2 months. Record: "My break point is when [variable] hits [number]."

5. Implication (~6 min). Capstone Journal: - My break point is ___. - What this means for my venture: (one sentence — this is the implication, not the math.)

Differentiation

- **ELL.** Provide the sensitivity table pre-formatted with labels. Pair-work allowed.
- **IEP/504.** Reduce to 1 variable (the most impactful). Provide sample numbers to test against.
- **Advanced learners.** Add a 2-variable scenario (price down + volume up — does it net out?). Compute the elasticity implied: if a 10% price cut needs a 15% volume bump to break even, what does that say about your offer?

Assessment

Formative: Walk and look at the sensitivity tables. **Summative:** Sensitivity table + break-point implication is part of the Unit 3 Cash Pack.

Teacher notes

- Many students will discover that their venture breaks at a surprisingly small change. That's the lesson. Validate it.
- A student says "this is depressing." Reframe: you now know the thing that will most likely kill your venture. Most adults don't.
- Connect forward: the break point becomes one of the experiments in the Unit 4 growth backlog.

Lesson 9 — Building the 5-Experiment Growth Backlog

> **"An MVP is the smallest test that could change your mind. It's not a v1."**
>
> - CASH, GRADE 11

Grade band: 9-12 **Time:** 60 minutes **Unit:** 4 — Execute under uncertainty **Topic area:** Hypothesis · experiment design · metrics

Objectives

- Write a 5-experiment growth backlog for the Capstone venture, with hypothesis, test, and metric for each.
- Distinguish a leading metric from a lagging metric using the team's chosen experiments.

Standards alignment

- **NGSS-ETS HS-ETS1-3:** Evaluate a solution to a complex real-world problem based on prioritized criteria and trade-offs.
- **CCSS-Math S-IC.A.1:** Understand statistics as a process for making inferences about population parameters based on a random sample from that population. (Applied at experiment-design level.)
- **C3 D2.Eco.13.9-12:** Explain why advancements in technology and investments in capital goods and human capital increase economic growth.
- **CCSS-ELA W.11-12.4:** Produce clear and coherent writing.

Materials

- Cash Video #7 ("The 5-Experiment Backlog") — 2:50.
- Backlog template: 5 rows × 4 columns (Hypothesis, Test, Metric, Stop Rule).
- Capstone Journal.

Vocabulary

- **Hypothesis** — a falsifiable claim about cause and effect: "If we change X, then Y will happen because Z."
- **Experiment** — the smallest test that would tell us whether the hypothesis is true.
- **Traction** — evidence that customers actually want what you're offering, expressed in a metric that moves.
- **Leading metric** — a near-term signal that predicts the lagging metric (e.g., # of trial sign-ups predicts paid customers).
- **Lagging metric** — the outcome itself (e.g., paid customers, revenue).
- **Pivot vs. persevere** — the decision after an experiment: change direction, or keep going.

Procedure

1. Engage — Cash V7 + Frame (~7 min). Play Cash Video #7. Then post: "What's the difference between 'we'll work harder' and 'we'll run experiment 1 by Friday'?" Pair-share.

2. Hypothesis mini-lesson (~10 min). A good hypothesis has three parts: - The change ("If we..."). - The predicted outcome ("...then Y will happen..."). - The reason ("...because Z.")

Bad: "We'll do more outreach." Good: "If we send 20 personal DMs to soccer parents, then we'll get 3 trial sign-ups by Friday, because soccer parents talk to each other."

3. Apply — Draft 5 experiments (~25 min). Each team drafts 5 experiments in the template. Confer: most teams will start with experiments that take too long. Coach: what could we test in 5 days, not 5 weeks?

4. Leading vs. lagging (~10 min). For each of the 5 experiments, identify the leading metric (what we'll see in the test window) and the lagging metric (what it predicts). Some experiments will only have a lagging metric — coach to find a leading one.

5. Stop rule (~5 min). Each experiment needs a stop rule: "If by [date], [metric] is below [number], we stop and reassess." Without a stop rule, experiments run forever.

6. Close — Sequence the backlog (~3 min). Teams rank the 5 experiments by which to run first (highest learning per dollar/hour). Note the dependency between experiments.

Differentiation

- **ELL.** Provide hypothesis sentence frames. Allow native-language brainstorming.

- **IEP/504.** Start with 3 experiments. Build to 5 by end of Unit 4 launch week.
- **Advanced learners.** Add an experiment with a paid component (small ad spend, paid pilot). Identify the financial cap on the experiment in advance.

Assessment

Formative: Walk during draft. **Summative:** The 5-experiment backlog is the Unit 4 sprint plan; will be tracked weekly.

Teacher notes

- Most teams write 5 to-dos, not 5 experiments. The difference: an experiment has a hypothesis and a stop rule. A to-do has neither.
- A team says "we already know what will work." Push: what would have to be true for you to be wrong? If they can answer, write the experiment to test it.

Lesson 10 — Investor-Style Pitch: Defense Day Itself

Grade band: 9-12 **Time:** 90 minutes (block) **Unit:** 4 — Execute under uncertainty **Topic area:** Pitch · panel Q&A · revision

Objectives

- Deliver a 5-minute investor-style pitch with: customer, problem, solution, traction slide, ask, and "what we learned" slide.
- Respond to 3–5 panel questions using evidence from the sprint.
- Capture panel feedback and write a 1-paragraph revision plan.

Standards alignment

- **CCSS-ELA SL.11-12.4:** Present information, findings, and supporting evidence — investor-style pitch.
- **CCSS-ELA SL.11-12.3:** Evaluate a speaker's point of view, reasoning, and use of evidence — applied to peer pitch critique.
- **Jump$tart Standard 6, Benchmark 12-4:** Apply systematic decision-making to long-term goals.
- **NGSS-ETS HS-ETS1-3:** Evaluate a solution to a complex real-world problem based on prioritized criteria and trade-offs.

Materials

- Pitch deck (provided template; teams adapted).

- Pitch Presentation Rubric (Rubric Bank).
- A panel of 3–5 adults: local entrepreneurs, parents, school staff (recruited by Week 30).
- Capstone Journal.
- Recording device.

Vocabulary

- **Traction** — evidence customers actually want it: number of customers, repeat rate, revenue, retention.
- **Ask** — the specific thing the team wants from the audience (capital, intros, advisors, time).
- **What we learned** — the slide that names what the sprint disconfirmed and what it confirmed.

Procedure

1. Engage — Panel introduction (~10 min). Welcome the panel. Cash voice: "You're about to see five teams who've spent six weeks on something real. They're 16 and 17 years old. They've got 5 minutes each. Your questions are not 'gotchas.' They're the questions a real investor would ask. Be hard, be fair, be specific."

2. Pitch round 1 (3 teams × ~15 min each = 45 min). Each team: 5 minutes pitch, 5 minutes Q&A, 5 minutes panel deliberation + scoring. Recording on. The "what we learned" slide is the second-to-last; the ask is last.

3. Break (~5 min). Move energy.

4. Pitch round 2 (2 teams × ~15 min each = 30 min). As above.

5. Close — Revision plan (~10 min). Each student writes in the Capstone Journal: - The strongest panel question I got. (Quote it.) - My honest answer if I had it to do again. (One paragraph.) - One change I will make to the deck before submitting the final version on Monday.

The revision is graded as part of the LRCI outcome: I can deliver a pitch and incorporate panel feedback into a revision.

Differentiation

- **ELL.** Allow team-shared speaking (each member takes a section in their strongest mode). Provide the Q&A sentence frames in advance.
- **IEP/504.** Pre-record a 90-second segment to play during the pitch; live-deliver the rest. Audio-only Q&A allowed.
- **Advanced learners.** Take the panel's hardest question and write a 1-page memo addressing it as the revision deliverable.

Assessment

Formative: Panel scoring sheets (informal; coaching purpose). **Summative:** Pitch Presentation Rubric (analytic, 6-criterion). Final grade includes the Revision (LRCI outcome).

Teacher notes

- Coach the panel before they arrive: the goal is questions that surface the team's evidence, not questions that prove the panelists clever.
- Recording matters. Teams will rewatch in Week 37 (the bridge to Grade 12) and find things they missed.
- The "what we learned" slide is the year's most important slide. Coach against the "we crushed it" energy. The teams who say "here's what didn't work" outperform the hype team almost every time.
- Grade 12 takes whatever happens here and runs it to a Launch-or-Learn decision. Treat the pitch as a checkpoint in a longer arc, not a finale.

Cross-lesson notes

These ten lessons sample the year. The full year has roughly 36 instructional weeks; the unsampled weeks are filled by:

- Continued Capstone work blocks (the Wednesday work block from Grade 7 scaled up to a 90-minute block).
- Vocabulary openers and Frayer model builds.
- Cash video viewings (Weeks 1, 5, 10, 14, 19, 24, 30, 36 — see scripts file).
- Pivot windows (Weeks 9, 19, 29) for venture or experiment changes.
- Optional guest speakers (target: 2–3 across the year, especially in Unit 4).
- Field interviews with local business owners (BAVC outcome — Weeks 6 and 20).

Rubrics referenced (from the Rubric Bank):

- **Business Plan Rubric** — Unit 4 plan and Unit 1 charter.
- **Pitch Presentation Rubric** — Unit 4 final defense.
- **Budget Project Rubric** — Unit 3 forecast.
- **Customer Research Rubric** — Unit 2 sales discovery and Unit 4 sprint experiments.
- **Reflection Writing Rubric** — every retrospective and Capstone Journal end-of-unit memo.

AN INTERLUDE · GRADE 11

"Most adults skip this step. You won't."

the band's working assumption.

2

Senior expert upgrade pack — Grade 11 misconceptions

Common Misconceptions (Grade 11)

Belief	Reality	Coach
"If I'm profitable, I have cash."	Profit is an opinion. Cash is a fact. You can be profitable on paper and broke in the bank — happens often when revenue is delayed or AR isn't collected.	Walk through the Founder A / Founder B example. "Same profit. One ran out of cash. Why?"
"Sales is about closing."	Sales is about discovery. The close is the easy part if discovery was honest. Beginners flip the ratio — too much pitch, not enough listening.	"In your role-play, count: what % was you talking? What % was the customer? Discovery should be most of the conversation."
"Leadership is charisma."	Leadership at 16 is mostly clarity, follow-through, and earning trust over four weeks. Charisma helps but doesn't substitute.	Use the Day 1 leadership stance from Lesson 1. "What did the leader actually DO that mattered?"
"An experiment that fails is a waste."	An experiment that disconfirms a hypothesis is exactly the success you wanted. The failure is running an experiment without naming the hypothesis first.	"What did your hypothesis say? What did you learn? If your hypothesis was 'X works,' and X didn't work, your experiment was successful — it changed your mind."
"Investors reward great ideas."	Investors reward learning. The 'what we learned' slide is often the most important. A team that says 'here's what didn't work and what we'd do' outperforms the hype team.	"Practice your what-we-learned slide. What's the most embarrassing thing on it? Keep that one."

Three sensitivity-analysis worked examples (deepening Lesson 8)

The original lesson teaches the form. Add three at three different sensitivities.

WORKED EXAMPLE A — REVENUE IS THE LOAD-BEARING VARIABLE

A subscription content venture. Base case: 100 subscribers × $5/mo × 12 mo = $6,000.

Sensitivity table:

Subscribers	Annual revenue	Net income (after $1,200 fixed costs)
50 (worst)	$3,000	$1,800
100 (base)	$6,000	$4,800
200 (best)	$12,000	$10,800

The variable that moves net income most: subscriber count. Founder should focus on growth.

WORKED EXAMPLE B — COST IS THE LOAD-BEARING VARIABLE

A custom-printing venture. Revenue is locked at $10,000 (a contracted year). Cost varies by efficiency.

Cost-per-unit	Variable cost (200 units)	Net income
$40 (worst)	$8,000	$2,000
$30 (base)	$6,000	$4,000
$20 (best)	$4,000	$6,000

The variable that moves net income most: cost. Founder should focus on cost reduction (better supplier, batch ordering).

WORKED EXAMPLE C — MIXED SENSITIVITY

A tutoring service. Revenue and cost both vary.

Scenario	Revenue	Variable cost	Net income
Worst (low students, high cost)	$5,000	$3,000	$0
Base	$10,000	$4,000	$4,000
Best	$15,000	$4,500	$8,500

The variable that moves most: revenue (× 3). Cost varies less (× 1.5). Focus first on growth, then on cost discipline.

ROUND 2 PATCH — Common Misconceptions (Grade 11)

> **“Revenue is loud. Contribution margin is true. Compute one number this week.”**
>
> - CASH, GRADE 11

Common kid-belief	Reality	Coaching move
"If Im profitable, I have cash."	Profit is an opinion (timing of recognition; depreciation; receivables). Cash is a fact (whats actually in the bank). The 12-month forecast surfaces the gap.	Run the worked example: P&L shows $20K profit; cash on hand is $2K because customers havent paid yet. Quote Cash: "Profit is an opinion. Cash is a fact."
"A 5-step sales conversation is canned."	A 5-step sales conversation is structured, not canned. The structure (open / discover / present / handle objection / close) gives you a frame; the words inside are real.	Run two role-plays — one with the structure, one without. Discuss which felt more natural.
"If I push hard enough, the customer will say yes."	Pushy closing wins one transaction and loses the next 10. Honest sales build customers who come back.	Use the rubrics "honest claims" criterion. Score two role-plays; the pushy one fails.
"Investor pitches are about confidence."	Investor pitches are about evidence. Confidence without evidence is theater; evidence with calm delivery wins.	Show two pitch styles. Which has 3 numbers and 2 customer quotes? Which has only adjectives?
"Hiring a contractor is just paying someone."	Hiring a contractor requires a scope of work, kill criteria, and a 1099 at year-end. Without scope, youll fight; without 1099, IRS issue.	Walk through a 1-paragraph scope of work template.

ROUND 2 PATCH — Worked Examples for Cash Flow Forecast Lesson

Three fully-worked 12-month forecasts:

Forecast 1 (steady). A coffee cart with steady $5K/month revenue, $3K/month cost, $2K/month profit. Cash flow ending each month: month 1 ending cash = $2K; month 6 = $12K; month 12 = $24K. Predictable.

Forecast 2 (lumpy). A photography business with revenue concentrated in May-October ($8K/month) and low in November-April ($1K/month). Costs $3K/month constant. Cash low point: April ($2K/month revenue minus $3K = −$1K cash flow that month). The cash-tight month is April. Fix: save more in summer, run small workshops in winter for revenue smoothing.

Forecast 3 (seasonal). An Etsy shop with revenue $1K/month most of the year, $15K in November-December (holiday). Costs $2K/month most of the year, $5K in October (inventory buildup). Cash low point: October ($1K revenue – $5K cost = −$4K cash flow). Fix: take a small loan in September to fund October inventory; repay from December revenue.

Coaching: "Steady is rarest. Lumpy and seasonal are normal. The 12-month forecast is for finding the cash-tight month before it surprises you."

ROUND 2 PATCH — Multi-Class Branching Scenario (Grade 11)

"Two cash-flow forecasts, same revenue, different timing." A 2-day branching scenario.

- **Day 1.** Founder A and Founder B both project $60K annual revenue. Founder A has revenue evenly across 12 months ($5K each). Founder B has 80% in last 4 months ($12K, $12K, $12K, $12K) and 20% in first 8 months ($1.5K each). Costs are $4K/month for both. Whose cash gets tightest first?
- **Day 2.** Founder Bs cash low point is month 8: revenue $12K just started; cumulative cash deficit ~$15K. Discuss fixes: smaller upfront cost, partial payment terms with customers, a bridge loan. Compare to Founder A who never has a cash-tight month.

This branching practices BAVC (case study), PSIG (5-experiment growth backlog), MFL (12-month forecast), CBM (sales conversation under cash pressure), OSO (sprint board with weekly check-ins), LTO (4-week team lead with cash-flow context), ESL (3 ethical guardrails — including paying contractors on time when cash is tight), LRCI (pitch revision based on the cash-tight month diagnosis).

ROUND 2 PATCH — Hiring Basics Lesson (Grade 11, NEW)

A 30-minute mini-lesson added to Unit 4. Goal: introduce **hiring a contractor**.

When to hire a contractor vs. employee

- **Hire a contractor when:** the work is project-based, defined scope, short timeline, contractor uses their own tools, contractor works for other clients too.
- **Hire an employee when:** the work is ongoing, you control the schedule and tools, the work is core to the business, person works for you exclusively.

For most teen ventures: contractors only. Employees come later.

What a 1099 is (the version you need)

- A 1099-NEC is a tax form you file when youve paid a contractor $600+ in a year.
- Due January 31 of the following year.
- You file with the IRS and give a copy to the contractor.
- Software like QuickBooks or Gusto handles this. So does an accountant.

How to write a 1-paragraph scope of work

Format:

```
 SCOPE OF WORK
Contractor: [NAME]
Project: [PROJECT NAME]
Deliverables: [SPECIFIC LIST]
Timeline: Start [DATE], complete by [DATE].
Compensation: $[AMOUNT], paid [WHEN — e.g., 50% upfront, 50% on delivery].
Kill criteria: This work is acceptable if [SPECIFIC CRITERIA]. If not acceptable, cont
Communication: We will check in [FREQUENCY — e.g., weekly Friday email].
```

Kill criteria (the most important clause)

Without kill criteria, you cant tell the contractor "this isnt what we agreed." With kill criteria, both parties have a clear bar. Kill criteria should be: specific, observable, agreed-upon before the work starts.

ROUND 2 PATCH — Teacher Move Set (Grade 11)

- **Student says "if Im profitable, I have cash."** Say: "Walk me through your forecast. When does each customer pay? When do bills come due? Wheres the gap?"
- **Student writes a sales role-play that pressures the customer.** Say: "Re-read the rubric: honest claims, fair to the customer. Re-do the close without pressure. Whats the customers no-pressure way out?"
- **Students investor pitch is all energy and no numbers.** Say: "Whats the evidence? Show me 3 numbers and 2 customer quotes. The energy is fine; the substance has to be there."

- **Student wants to hire a contractor without a scope.** Say: "30 minutes writing a scope saves 30 days of fighting later. Lets write it now."
- **Student treats the 6-week sprint like a 6-week marathon.** Say: "A sprint has demos. Whats the demo at week 2? Week 4? Week 6?"

ENDNOTES & STANDARDS

Citations and alignment

Grade 11 cites 3-6 standards across CCSS, Jump$tart, CEE, CASEL, and C3 frameworks. Detailed alignment lives in the master Standards Alignment Map.

1. **Jump$tart Coalition Personal Finance Standards (2021 ed.).** Spending and Saving; Credit and Debt; Employment and Income; Investing; Risk Management and Insurance; Financial Decision Making.
2. **Council for Economic Education (CEE).** Voluntary National Content Standards in Economics.
3. **CCSS-ELA, Grades 11-12.** W.11-12.1, W.11-12.4, SL.11-12.1, SL.11-12.4, RST.11-12.7.
4. **CCSS-Math.** N-Q.1-3 (Reasoning with Quantities), S-IC (Statistics & Inferences), F-IF (Functions), MP.4 (Modeling).
5. **CASEL Core Competencies.** Self-Awareness, Self-Management, Social Awareness, Relationship Skills, Responsible Decision-Making.
6. **C3 Framework for Social Studies State Standards.** Dimension 2 (Economics, Civics) at the high-school grade band.
7. **NGSS-ETS Engineering Practices.** ETS1 (Engineering Design) for the test-and-iterate spine of the year.
8. **Cash to Company Master Scope & Sequence.** 13 grades x 8 strands x 36 weeks; outcomes quoted verbatim from _master/00_Master_Scope_and_Sequence.md.
9. **Cash Mascot Style Guide.** 9-12 voice rules: multi-sentence arguments; vocabulary includes unit economics, runway, premortem, MVP; never flatters, never promises wealth.
10. **Sensitivity protocol.** No probing of family finances; financial scenarios framed as hypothetical for a sample household, business, or scenario.

One promise.

Cash to Company makes one promise: students who move t
program will be clearer thinkers about money and entrepren
matter what they end up doing for a living.

We do not promise wealth. We do not promise success. We pro
